Fiala, Václav Koubek, Jan Kratochvíl, 2004-08-09 This volume contains the papers presented at the 29th Symposium on Mathematical Foundations of Computer Science MFCS 2004 held in Prague Czech Republic August 22–27 2004. The conference was organized by the Institute for Theoretical Computer Science ITI and the Department of Theoretical Computer Science and Mathematical Logic KTI ML of the Faculty of Mathematics and Physics of Charles University in Prague. It was supported in part by the European Association for Theoretical Computer Science EATCS and the European Research Consortium for Informatics and Mathematics ERCIM. Traditionally the MFCS symposia encourage high quality research in all branches of theoretical computer science. Ranging in scope from automata, formal languages, data structures, algorithms and computational geometry to complexity theory, models of computation and applications including computational biology, cryptography, security and artificial intelligence, the conference offers a unique opportunity to researchers from diverse areas to meet and present their results to a general audience. The scientific program of this year's MFCS took place in the lecture halls of the recently reconstructed building of the Faculty of Mathematics and Physics in the historical center of Prague with the famous Prague Castle and other celebrated historical monuments in sight. The view from the windows was a challenging competition for the speakers in the light for the attention of the audience. But we did not fear the result. Due to the unusually tough competition for this year's MFCS, the admitted presentations certainly attracted considerable interest. The conference program and the proceedings consisted of 60 contributed papers selected by the Program Committee from a total of 167 submissions.

Research, Artificial Intelligence and Neuroinformatics Boris M. Velichkovsky, Pavel M. Balaban, Vadim L. Ushakov, 2021-04-17 This book reports on theoretical and experimental research answering key questions in neuroscience philosophy of mind and cognitive research. It gives a special emphasis on findings achieved within the territory of the former USSR which has remained largely unknown to an international readership. The volume gathers authoritative studies on cognitive development, consciousness, attention and perception. It covers research on eye movements, language, speech and semantics, emotion as well as brain functional states and a variety of decision making processes. It also highlights important advances in cognitive robotics and artificial intelligence discussing brain computer interfaces and other practically relevant technologies. It includes studies on human subjects in both healthy and disease conditions and investigations on the molecular mechanisms of cognition in animal models. Chapters are based on invited lectures and peer reviewed contributions to the 9th International Conference on Cognitive Sciences Intercognsci 2020 held on October 10-16 2020 in Moscow. The conference was organized by the Interregional Association of Cognitive Studies with the participation of the Pavlov Society for Neurophysiology and Higher Nervous Activity and supported by the Russian Academy of Sciences, the Russian Foundation for Basic Research and a number of the north eastern European research institutions. All in all this book provides cognitive scientists around the world with a timely snapshot of interdisciplinary research and cutting edge models and a major source of inspiration for future collaborations in the areas of artificial intelligence and cognitive neuroscience.

A Guided

Tour of Relational Databases and Beyond Mark Levene, George Loizou, 2012-09-18 Database theory is now in a mature state and this book addresses important extensions of the relational database model such as deductive, temporal and object oriented databases. It provides an overview of database modelling with the Entity Relationship (ER) model and the relational model providing the pivot on which the material revolves. The main body of the book focuses on the primary achievements of relational database theory including query languages, integrity constraints, database design, computable queries and concurrency control. The most important extensions of the relational model are covered in separate chapters. This book will be useful to third year computer science undergraduates and postgraduates studying database theory and will also be of interest to researchers and database practitioners who would like to know more about the ideas underlying relational database management systems and the problems that confront database researchers.
