Mathematical Models in Photographic Science Avner Friedman, David Ross, 2012-12-06 This book presents mathematical models that arise in current photographic science The book contains seventeen chapters each dealing with one area of photographic science and a final chapter containing exercises Each chapter except the two introductory chapters begin with general background information at a level understandable by graduate and undergraduate students It then proceeds to develop a mathematical model using mathematical tools such as ordinary differential equations partial differential equations and stochastic processes Next some mathematical results are mentioned often providing a partial solution to problems raised by the model Finally most chapters include open problems The last chapter of the book contains Modeling and Applied Mathematics exercises based on the material presented in the earlier chapters These exercises are intended primarily for graduate students and advanced undergraduates Photographic Science and Engineering ,1984
