Feiwel, 1972 A Systems Approach to the Aeromedical Aircraft Routing Problem Using a Computer-based Model Dennis Robert Mclain, 1984 *Introduction to Optimum Design* Jasbir Singh Arora, 2011-08-12

Introduction to Optimum Design Third Edition describes an organized approach to engineering design optimization in a rigorous yet simplified manner. It illustrates various concepts and procedures with simple examples and demonstrates their applicability to engineering design problems. Formulation of a design problem as an optimization problem is emphasized and illustrated throughout the text. Excel and MATLAB are featured as learning and teaching aids. Basic concepts of optimality conditions and numerical methods are described with simple and practical examples making the material highly teachable and learnable. Includes applications of optimization methods for structural mechanical aerospace and industrial engineering problems. Introduction to MATLAB Optimization Toolbox. Practical design examples introduce students to the use of optimization methods early in the book. New example problems throughout the text are enhanced with detailed illustrations. Optimum design with Excel Solver has been expanded into a full chapter. New chapter on several advanced optimum design topics serves the needs of instructors who teach more advanced courses.

Balanced Automation Systems for Future Manufacturing Networks Ángel Ortiz Bas, Rubén Dario Franco, Pedro Gomez Gasquet, 2010-06-29

Manufacturing and operations management paradigms are evolving toward more open and resilient spaces where innovation is driven not only by ever changing customer needs but also by agile and fast reacting networked structures. Flexibility, adaptability and responsiveness are properties that the next generation of systems must have in order to successfully support such new emerging trends. Customers are being attracted to be involved in Co innovation Networks as proved responsiveness and agility is expected from industry ecosystems. Renewed production systems need to be modeled, engineered and deployed in order to achieve cost effective solutions. BASYS conferences have been developed and organized as a forum in which to share visions and research findings for innovative sustainable and knowledge based products, services and manufacturing models. Thus the focus of BASYS is to discuss how human actors, emergent technologies and even organizations are integrated in order to redefine the way in which the value creation process must be conceived and realized. BASYS 2010 which was held in Valencia, Spain, proposed new approaches in automation where synergies between people, systems and organizations need to be fully exploited in order to create high added value products and services. This book contains the selection of the papers which were accepted for presentation at the BASYS 2010 conference covering consolidated and emerging topics of the conference scope.
