

- partition a whole into fractional parts to represent multiplying fractions using an area model.

Example: $\frac{2}{3} \times \frac{3}{4}$

The whole is partitioned into three equal parts. Two of the three parts are shaded to represent $\frac{2}{3}$.

Then the whole is partitioned into four equal parts. Three of the four parts are shaded to represent $\frac{3}{4}$.

The product is the overlapped region.

$$\frac{2}{3} \times \frac{3}{4} = \frac{6}{12}$$

The answer is $\frac{6}{12}$

3rd Quarter

- use a fraction to represent division.
Example: Think about the fraction $\frac{3}{4}$ as $3 \div 4$

- use models to divide a whole number by a unit fraction and to divide a unit fraction by a whole number

Example: Dr. Smith schedules 2 hours for dentist appointments on Friday.

Each appointment last $\frac{1}{3}$ of an hour. How many appointments can he schedule on Friday?

$2 \div \frac{1}{3} = 6$ because 2 hours are being divided into equal groups, each $\frac{1}{3}$ of an hour.

- use a line plot (a graph that shows frequency of data on a number line) to interpret measurement data.

Mathematical Finance Ernst Eberlein, Jan Kallsen, 2019-12-03 Taking continuous time stochastic processes allowing for jumps as its starting and focal point this book provides an accessible introduction to the stochastic calculus and control of semimartingales and explains the basic concepts of Mathematical Finance such as arbitrage theory hedging valuation principles portfolio choice and term structure modelling It bridges the gap between introductory texts and the advanced literature in the field Most textbooks on the subject are limited to diffusion type models which cannot easily account for sudden price movements Such abrupt changes however can often be observed in real markets At the same time purely discontinuous processes lead to a much wider variety of flexible and

tractable models This explains why processes with jumps have become an established tool in the statistics and mathematics of finance Graduate students researchers as well as practitioners will benefit from this monograph

Big-(Wo)men, Tyrants, Chiefs, Dictators, Emperors and Presidents Francesco dell'Isola, 2019-07-19 This book highlights mathematical ideas to help explain a number of important aspects of the dynamics of social groups These ideas are similar to those used to describe the behaviour of Lagrangian mechanical systems and as such this book appeals to anyone wanting to gain an understanding of the intrinsic unity of natural phenomena
