Inquiry through Instructional Technology in Math and Science Lennex, Lesia, Nettleton, Kimberly

Fletcher, 2012-01-31 There exists a wealth of information about inquiry and about science technology engineering and mathematics STEM but current research lacks meaningfully written thoughtful applications of both topics Cases on Inquiry through Instructional Technology in Math and Science represents the work of many authors toward meaningful discourse of inquiry used in STEM teaching This book presents insightful information to teachers and teacher education candidates about using inquiry in the real classroom case studies from which research suggests appropriate uses and tangible direction for creating their own inquiry based STEM activities Sections take the reader logically through the meaning of inquiry in STEM

teaching how to use technology in modern classrooms STEM projects which successfully integrate inquiry methodology and inquiry problem solving within STEM classrooms with the aim of creating activities and models useful for real world classrooms Solving Non-standard Packing Problems by Global Optimization and Heuristics Giorgio Fasano,2014-04-21 This book results from a long term research effort aimed at tackling complex non standard packing issues which arise in space engineering The main research objective is to optimize cargo loading and arrangement in compliance with a set of stringent rules Complicated geometrical aspects are also taken into account in addition to balancing conditions based on attitude control specifications Chapter 1 introduces the class of non standard packing problems studied Chapter 2 gives a detailed explanation of a general model for the orthogonal packing of tetris like items in a convex domain A number of additional conditions are looked at in depth including the prefixed orientation of subsets of items the presence of unusable holes separation planes and structural elements relative distance bounds as well as static and dynamic balancing requirements The relative feasibility sub problem which is a special case that does not have an optimization criterion is discussed in Chapter 3 This setting can be exploited by introducing an ad hoc objective function aimed at facilitating the finding of integer feasible solutions The third chapter also discusses the issue of tightening the general MIP model by introducing valid inequalities A MIP based heuristic approach is developed in Chapter 4 where the basic concept of abstract configuration is presented Chapter 5 is devoted to experimental results relevant to a real world application framework Chapter 6 adopts both extensions of the general MIP model and non linear formulations to tackle two further non standard packing issues The final Chapter 7 presents conclusions and provides insights regarding prospective developments including non standard scheduling aspects Practitioners and researchers interested in advanced optimization model development and solution in the context of logistics transportation systems complex structures manufacturing and electronics will find this book useful The book can also be used in graduate courses on nonlinear including global and mixed integer optimization as a valuable collection of practically meaningful object packing applications *Building Vocabulary: Level 10 Kit* ,2010-01-29 Building Vocabulary from Word Roots provides a systematic approach to teaching vocabulary using Greek and Latin prefixes bases and suffixes Over 90% of English words of two or more syllables are of Greek or Latin origin Instead of learning words and definitions in isolation students learn key roots and strategies for deciphering words and their meanings across all content areas Building Vocabulary from Word Roots Level 10 kit includes Teacher s Guide Student Guided Practice Book Each kit includes a single copy additional copies may be ordered in quantities of 10 or more Assessments to support data driven instruction and Digital resources including modeled lessons 50 bonus activities and more **ENC Focus** ,2001
