The First Sourcebook on Asian Research in Mathematics Education - 2 Volumes Bharath Sriraman,Jinfa Cai,Kyeonghwa Lee,Lianghuo Fan,Yoshinori Shimizu,Chap Sam Lim,K. Subramaniam,2015-08-01 Mathematics and Science education have both grown in fertile directions in different geographic regions Yet the mainstream discourse in international handbooks does not lend voice to developments in cognition curriculum teacher development assessment policy and implementation of mathematics and science in many countries Paradoxically in spite of advances in information technology and the flat earth syndrome old distinctions and biases between different groups of researcher s persist In addition limited accessibility to conferences and journals also contribute to this problem The International Sourcebooks in Mathematics and Science Education focus on under represented regions of the world and provides a platform for researchers to showcase their research and development in areas within mathematics and science education The First Sourcebook on Asian Research in Mathematics Education China Korea Singapore Japan Malaysia and India provides the first synthesized treatment of mathematics education that has both developed and is now prominently emerging in the Asian and South Asian world The book is organized in sections coordinated by leaders in mathematics education in these countries and editorial teams for each country affiliated with them The purpose of unique sourcebook is to both consolidate and survey the established body of research in these countries with findings that have influenced ongoing research agendas and informed practices in Europe North America and other countries in addition to serving as a platform to showcase existing research that has shaped teacher education curricula and policy in these Asian countries The book will serve as a standard reference for mathematics education researchers policy makers practitioners and students both in and outside Asia and complement the Nordic and NCTM perspectives **Mathematical Statistics and Probability Theory** Madan L. Puri,P. Révész,Wolfgang Wertz,P. Bauer,F. Konecny,2013-11-11 The past several years have seen the creation and extension of a very conclusive theory of statistics and probability Many of the research workers who have been concerned with both probability and statistics felt the need for meetings that provide an opportunity for personal con tacts among scholars whose fields of specialization cover broad spectra in bothstatistics and probability to discuss major open problems and new solutions and to provide encouragement for further research through the lectures of carefully selected scholars moreover to introduce to younger colleagues the latest research techniques and thus to stimulate their interest in research To meet these goals the series of Pannonian Symposia on Mathematical Statistics was organized beginning in the year 1979 the first second and fourth one in Bad Tatzmannsdorf Burgenland Austria the third and fifth in Visegrad Hungary The Sixth Pannonian Symposium was held in Bad Tatzmannsdorf again in the time between 14 and 20 September 1986 under the auspices of Dr Heinz FISCHER Federal Minister of Science and Research Theodor KERY President of the State Government of Burgenland Dr Franz SAUERZOPF Vice President of the State Govern ment of Burgenland and Dr Josef SCHMIDL President of the Austrian Sta tistical Central

Office The members of the Honorary Committee were Pal ERDOS WXadisXaw ORLICZ Pal REVESZ Leopold SCHMETTERER and Istvan VINCZE those of the Organizing Committee were Wilfried GROSSMANN Uni versity of Vienna Franz KONECNY University of Agriculture of Vienna and as the chairman Wolfgang WERTZ Technical University of Vienna   The Messenger of Mathematics ,1908   **The Mathematics Student** A. Narasinga Rao,1971   Handbook of International Research in Mathematics Education Lyn D. English,2002-03 This state of the art Handbook brings together important mathematics education research that makes a difference in both theory and practice research that anticipates problems and needed knowledge before they become impediments to progress interprets future oriented problems into researchable issues presents the implications of research and theory development in forms that are useful to practitioners and policymakers and facilitates the development of research communities to focus on neglected priorities or strategic opportunities The volume represents a genuine attempt by contributors from around the world to advance the discipline rather than simply review what has been done and what exists The Handbook was developed in response to a number of major global catalysts for change including the impact of national and international mathematics comparative assessment studies the social cultural economic and political influences on mathematics education and research the influence of progressively sophisticated and available technology and the increasing globalization of mathematics education and research From these catalysts have emerged specific priority themes and issues for mathematics education research in the 21st century Three key themes were identified for attention in this volume life long democratic access to powerful mathematical ideas advances in research methodologies and influences of advanced technologies Each of these themes is examined in terms of learners teachers and learning contexts with theory development as an important component of all these aspects Dynamic and forward looking the Handbook of International Research in Mathematics Education is distinguished by its focus on new and emerging theoretical models perspectives and research methodologies its uniformly high standard of scholarship and its emphasis on the international nature of mathematics education research It is an essential volume for all researchers professionals and students interested in mathematics education research in particular and more generally in international developments and future directions in the broad field of educational research   **Publisher's Monthly** ,2004   **Vibration of Shells** Arthur W. Leissa,1973 The vibrational characteristics and mechanical properties of shell structures are discussed The subjects presented are 1 fundamental equations of thin shell theory 2 characteristics of thin circular cylindrical shells 3 complicating effects in circular cylindrical shells 4 noncircular cylindrical shell properties 5 characteristics of spherical shells and 6 solution of three dimensional equations of motion for cylinders   *Depth Perception in Frogs and Toads* Donald House,2013-03-13 Depth Perception in Frogs and Toads provides a comprehensive exploration of the phenomenon of depth perception in frogs and toads as seen from a neuro computational point of view Perhaps the most important feature of the book is the development and presentation of two neurally realizable depth perception algorithms that utilize both monocular

and binocular depth cues in a cooperative fashion One of these algorithms is specialized for computation of depth maps for navigation and the other for the selection and localization of a single prey for prey catching The book is also unique in that it thoroughly reviews the known neuroanatomical neurophysiological and behavioral data and then synthesizes organizes and interprets that information to explain a complex sensory motor task The book will be of special interest to that segment of the neural computing community interested in understanding natural neurocomputational structures particularly to those working in perception and sensory motor coordination It will also be of interest to neuroscientists interested in exploring the complex interactions between the neural substrates that underly perception and behavior **Mathematical Methods and Modelling in Hydrocarbon Exploration and Production** Armin Iske,Trygve Randen,2006-01-27 Hydrocarbon exploration and production incorporate great technology challenges for the oil and gas industry In order to meet the world s future demand for oil and gas further technological advance is needed which in turn requires research across multiple disciplines including mathematics geophysics geology petroleum engineering signal processing and computer science This book addresses important aspects and fundamental concepts in hydrocarbon exploration and production Moreover new developments and recent advances in the relevant research areas are discussed whereby special emphasis is placed on mathematical methods and modelling The book reflects the multi disciplinary character of the hydrocarbon production workflow ranging from seismic data imaging seismic analysis and interpretation and geological model building to numerical reservoir simulation Various challenges concerning the production workflow are discussed in detail The thirteen chapters of this joint work authored by international experts from academic and industrial institutions include survey papers of expository character as well as original research articles Large parts of the material presented in this book were developed between November 2000 and April 2004 through the European research and training network NetAGES Network for Automated Geometry Extraction from Seismic The new methods described here are currently being implemented as software tools at Schlumberger Stavanger Research one of the world s largest service providers to the oil industry *Peer-assisted Learning* Keith Topping,Stewart Ehly,1998-07-01 Peer Assisted Learning PAL involves children in school consciously assisting others to learn and in so doing learning more effectively themselves It encompasses peer tutoring peer modeling peer education peer counseling peer monitoring and peer assessment which are differentiated from other more general co operative learning methods PAL is not diluted or surrogate teaching it complements and supplements but never replaces professional teaching capitalizing on the unique qualities and richness of peer interaction and helping students become empowered democratically to take more responsibility for their own learning In this book PAL is presented as a set of dynamic robust effective and flexible approaches to teaching and learning which can be used in a range of different settings The chapters provide descriptions of good practice blended with research findings on effectiveness They describe procedures that can be applied to all areas of the school curriculum and can be used with learners of all levels of ability including gifted

students students with disabilities and second language learners Among the distinguished contributors many are from North America while others are from Europe and Australia The applicability of the methods they present is worldwide Peer Assisted Learning is designed to be accessible and useful to teachers and to those who employ train support consult with and evaluate them Many chapters will be helpful to teachers aiming to replicate in their own school environments the cost effective procedures described A practical resources guide is included This volume will also be of interest to faculty and researchers in the fields of education and psychology to community educators who want to learn about the implications of Peer Assisted Learning beyond school contexts and to employers and others involved in post school training **Mathematical Magnetohydrodynamics** Nikolaos Xiros,2022-05-31 Fundamentals of mathematical magnetohydrodynamics MHD start with definitions of major variables and parameters in MHD fluids also known as MHD media and specifically plasmas encountered in nature as well as in engineering sytems e g metallurgy or thermonuclear fusion power Then collisions of fluids in such fluids are examined as well as motion of individual particles Then the basic principles of MHD fluids are introduced along with transport phenomena medium boundaries and surface interactions Then waves and resonances of all sorts in MHD media are presented The account concludes with the description of main MHD fluid types including plasma in fusion power generation **Random Growth Models** Michael Damron,Firas Rassoul-Agha,Timo Seppäläinen,2018-09-27 The study of random growth models began in probability theory about 50 years ago and today this area occupies a central place in the subject The considerable challenges posed by these models have spurred the development of innovative probability theory and opened up connections with several other parts of mathematics such as partial differential equations integrable systems and combinatorics These models also have applications to fields such as computer science biology and physics This volume is based on lectures delivered at the 2017 AMS Short Course Random Growth Models held January 2 3 2017 in Atlanta GA The articles in this book give an introduction to the most studied models namely first and last passage percolation the Eden model of cell growth and particle systems focusing on the main research questions and leading up to the celebrated Kardar Parisi Zhang equation Topics covered include asymptotic properties of infection times limiting shape results fluctuation bounds and geometrical properties of geodesics which are optimal paths for growth **Research in Education** ,1973
