This book describes the design development delivery and impact of the mathematics assessment for the OECD Programme for International Student Assessment PISA First the origins of PISA s concept of mathematical literacy are discussed highlighting the underlying themes of mathematics as preparation for life after school and mathematical modelling of the real world and clarifying PISA s position within this part of the mathematics education territory The PISA mathematics framework is introduced as a significant milestone in the development and dissemination of these ideas The underlying mathematical competencies on which mathematical literacy so strongly depends are described along with a scheme to use them in item creation and analysis The development and implementation of the PISA survey and

the consequences for the outcomes are thoroughly discussed Different kinds of items for both paper based and computer based PISA surveys are exemplified by many publicly released items along with details of scoring The novel survey of the opportunity students have had to learn the mathematics promoted through PISA is explained The book concludes by surveying international impact It presents viewpoints of mathematics educators on how PISA and its constituent ideas and methods have influenced teaching and learning practices curriculum arrangements assessment practices and the educational debate more generally in fourteen countries

A Readable Introduction to Real Mathematics Daniel Rosenthal, David Rosenthal, Peter Rosenthal, 2019-04-02 Designed for an undergraduate course or for independent study this text presents sophisticated mathematical ideas in an elementary and friendly fashion The fundamental purpose of this book is to teach mathematical thinking while conveying the beauty and elegance of mathematics The book contains a large number of exercises of varying difficulty some of which are designed to help reinforce basic concepts and others of which will challenge virtually all readers The sole prerequisite for reading this text is high school algebra Topics covered include mathematical induction modular arithmetic the Fundamental Theorem of Arithmetic Fermat's Little Theorem RSA encryption the Euclidean algorithm rational and irrational numbers complex numbers cardinality Euclidean plane geometry constructibility including a proof that an angle of 60 degrees cannot be trisected with a straightedge and compass infinite series higher dimensional spaces This textbook is suitable for a wide variety of courses and for a broad range of students of mathematics and other subjects Mathematically inclined senior high school students will also be able to read this book From the reviews of the first edition It is carefully written in a precise but readable and engaging style I thoroughly enjoyed reading this recent addition to the Springer Undergraduate Texts in Mathematics series and commend this clear well organised unfussy text to its target audiences Nick Lord The Mathematical Gazette Vol 100 547 2016 The book is an introduction to real mathematics and is very readable The book is indeed a joy to read and would be an excellent text for an appreciation of mathematics course among other possibilities G A Heuer Mathematical Reviews February 2015 Many a benighted book misguidedly addresses the need to teach mathematical thinking by framing reasoning or narrowly proof not as pervasive modality but somehow as itself an autonomous mathematical subject Fortunately the present book gets it right presenting well chosen basic conceptual mathematics suitably accessible after a K 12 education in a detailed self conscious way that emphasizes methodology alongside content and crucially leads to an ultimate clear payoff Summing Up Recommended Lower division undergraduates and two year technical program students general readers D V Feldman Choice Vol 52 6 February 2015

Mirman,2006 WHY GOD COULD NOT CREATE THE UNIVERSE WITH A DIFFERENT DIMENSION EVEN IF IT WANTED TO or perhaps anything else Perhaps the universe must be the way it is It seems that what is omnipotent is mathematics elementary arithmetic just counting Yet even mathematics is not powerful enough to create a universe there are just too many conditions conflicting Existence is impossible Beyond that for there to be structure is quite inconceivable But the universe does exist there are galaxies stars even the possibility of life That life is possible merely allows it to exist but only with the greatest good fortune does it actually occur Intelligence is vastly less likely ability and technology far more improbable That we are what we are seem so strange inconceivable that we are left merely with wonder and as we seem unable to realize the need for the deepest care responsibility and gratitude We have been given by the unbelievable benevolence of chance no life but life with the most wondrous part of the universe the ability to think to know to create to wonder and thus the demand that we use our most awesome gifts to protect them to protect and preserve the world in which they exist and the life likely so rare if not unique in the universe which has received these astounding favors of chance that has been given by nature its most exalted constituents What we are requires that we enhance what we are what we are part of to see understand and be grateful An exploration of the precise conditions required for the existence of humans in the universe the author does an admirable job delineating the laws of physics without becoming too bogged down in complicated jargon and he maintains a sense of wonder about the unique and random nature of the universe He repeatedly celebrates our highly improbable achievements as a species marveling at our ability to use the language of abstract mathematics to unravel the mysteries of existence the prevailing tone of the narrative is clear and confident marked by a meticulous attention to detail An often fascinating journey through the history of the universe and mankind Kirkus Discoveries
