Faltis, M. Beatriz Arias, 2013-03-01 Language in academic settings also referred to as academic language has gained attention in the field of second language learning owing to new understandings of the complexities of language inherent in learning academic content and new efforts to assess English learners language proficiency in the context of school learning The concept of academic language as distinct from social language has been in the academic literature since the mid 1950s and surfaced as a major construct in the field of bilingual education in the 1980s Many readers will be familiar with the ideas of BICS and CALP first introduced by Jim Cummins in the 1980s This book presents a critique of academic language as a separable construct from social language and introduces current research efforts to understand how English learners interact interpret and show understanding of language in academic contexts in ways that re think and go beyond the distinction between social and academic language The book is organized into three main sections each with a range of chapters that consider how academic language plays into how children and youth learn academic content as emergent bilingual students in school settings A Foreword and Afterword offer commentary on the book and its contents The intended audience for this book is graduate students teacher educators and researchers interested in issues of language and content learning for English learners the new mainstream of schools across the nation There is something for a wide range of readers and students of second language acquisition in this volume *Second Language Acquisition in Childhood* B. McLaughlin, 2013-10-28 First published in 1987 Throughout human history learning a second language has been an important part of the educational process From ancient times to the present school children have had to struggle to learn a second language and in many cases third and fourth languages To be educated meant to know a language other than the language of one s family and community The contemporary American educational system is one of

the few in recorded history that allows its products to remain monolingual

Preparing Classroom Teachers to Succeed with Second Language Learners Thomas Levine, Elizabeth Howard, David Moss, 2014-07-11 This volume identifies resources models and specific practices for improving teacher preparation for work with second language learners It shows how faculty positioned themselves to learn from resources experts preservice teachers their own practice and each other The teacher education professionals leverage their experience to offer theoretical and practical insights regarding how other faculty could develop their own knowledge improve their courses and understand their influence on the preservice teachers they serve The book addresses challenges others are likely to experience while improving teacher preparation including preservice teacher resistance the challenge of adding to already packed courses the difficulty of recruiting and retaining busy faculty members and the question of how to best frame the larger issues The authors also address options for integrating the work of improving teacher preparation for linguistic diversity into a variety of different teacher education program designs Finally the book demonstrates a data driven approach that makes this work consistent with many institutions mandate to produce research and to collect evidence supporting accreditation

International Handbook of Mathematical Learning Difficulties Annemarie Fritz, Vitor Geraldi Haase, Pekka Räsänen, 2019-01-30 This comprehensive volume provides teachers researchers and education professionals with cutting edge knowledge developed in the last decades by the educational behavioural and neurosciences integrating cognitive developmental and socioeconomic approaches to deal with the problems children face in learning mathematics The neurocognitive mechanisms and the cognitive processes underlying acquisition of arithmetic abilities and their significance for education have been the subject of intense research in the last few decades but the most part of this research has been conducted in non applied settings and there s still a deep discrepancy between the level of scientific knowledge and its implementation into actual educational settings Now it s time to bring the results from the laboratory to the classroom Apart from bringing the theoretical discussions to educational settings the volume presents a wide range of methods for early detection of children with risks in mathematics learning and strategies to develop effective interventions based on innovative cognitive test instruments It also provides insights to translate research knowledge into public policies in order to address socioeconomic issues And it does so from an international perspective dedicating a whole section to the cultural diversity of mathematics learning difficulties in different parts of the world All of this makes the International Handbook of Mathematical Learning Difficulties an essential tool for those involved in the daily struggle to prepare the future generations to succeed in the global knowledge society

Children's Mathematics Elizabeth Carruthers, Maulfry Worthington, 2006-08-30 In Case Study 5 a grassroots Children s Mathematics Network group the initiative supported the participants in their professional change by giving them a space for the detailed and joint consideration of children s mathematical thinking Another significant feature of this initiative is its focus on careful consideration and analysis of children s mathematics and the ways in which professionals can support and

encourage the children's mathematical thinking and reasoning. The standard of the mathematical understanding thinking and reasoning that the displays revealed was far higher than the specified curriculum objectives for children of this age.

Researching Effective CPD in Mathematics Education RECME project NCETM 2009. The review also plays great score by play-based learning of a mathematical nature and makes specific recommendations regarding early mark making as a precursor to abstract mathematical symbolism.

Section 115 features children's mathematical graphics and emphasises. The role of mark making in children's cognitive development is set out in the taxonomy Carruthers and Worthington 2006. The report recommends that local authorities, leaders, managers and head teachers should provide a culture with a significant focus on mathematical mark making and a learning environment that encourages children to choose to use their own mathematical graphics to support their mathematical thinking and processes.

The Williams Maths Review DCSF 2008. At the very heart of the success of the book is the authors' ability to see mathematics through young children's eyes by listening to and reflecting on the constant efforts made by children to make sense of their world. This is a liberating book which proposes that the teaching of mathematics could and should be a highly creative and enjoyable process.

Branwen Llewelyn Jones, Early Years Consultant at PACE Ltd, TACTYC Ground breaking. To single out any one chapter would be unfair because there is something thought provoking and inspirational throughout. If you want to expand your understanding upwards and outwards then get a copy soon.

Times Educational Supplement. I first read *Children's Mathematics Making Marks Making Meaning* a couple of years ago and it had an immediate impact on my own thinking and teaching and the work I do with trainee teachers. I'm sure you will find it compelling reading too. I think it has the potential to change in a fundamental way how we think about early mathematical development.

Lynne McClure, Editor Math Coordinator's File, Mathematics Association. In their exceptionally readable and informative book *Children's Mathematics Making Marks Making Meaning*, Carruthers and Worthington 2006 draw attention to one of the main goals of early years teaching that is to help children make links between the mathematics they have already encountered and continue to engage with at home and the more abstract mathematics of the school. These authors suggest that by encouraging children to represent mathematical ideas in their own ways and crucially by talking to the pupils about the marks they have made, we are given a window onto their thinking that may otherwise be inaccessible.

Liz Pumphrey, NRICH. This book draws on the authors' many years of teaching children aged three to eight years and also on their extensive research with children in the home, nursery and school. The authors explain the development and range of young children's mathematical marks and visual representations showing how children make mental connections between their own early marks and subsequent abstract mathematical symbolism and go on to develop their own written methods. Combining theory and practice, this acclaimed book demonstrates how children's own mathematical graphics are highly creative and show deep levels of thinking. The authors show how this is the key to success in school mathematics and to higher levels of achievement. The authors are winners of TACTYC's 2003 Jenefer Joseph Award for the Creative Arts 3-8 awarded for their
