Mathematics Content For Elementary And Middle School Teachers:

Mathematics Content for Elementary and Middle School Teachers Barbara Ridener, Penelope Joan Fritzer, 2004 A short primer on each of the major math content areas that preservice and inservice elementary and middle school teachers are required to know This book is an invaluable resource for the classroom teacher who needs both an overview for planning and help in answering student questions Based broadly on the national standards it gives the teacher general scientific information to cover most state s standards and to help prepare them for teacher certification exams It also provides a strong overview of mathematical knowledge to allow the teacher to find information on important concepts to see where significant moments in mathematical history fit chronologically and to improve the teacher s understanding of mathematical ideas and concepts Moreover it saves professors from having to re teach mathematics content so they can remain focused on the methods

Mathematics for Elementary and Middle School Teachers Sybilla Beckmann, 2022 This book is centered on the mathematical content of prekindergarten through grade 8 It addresses almost all of the K 8 CCSSM Standards for Mathematical Content from a teacher s perspective with a focus on how ideas develop and connect and on powerful ways of representing and reasoning about the ideas

Mathematics Content for Elementary Teachers Douglas K. Brumbaugh, Peggy L. Moch, MaryE Wilkinson, 2004-09-15 THE book for elementary education mathematics content courses Designed to help prospective teachers of elementary school mathematics learn content beyond the rote level this text stimulates readers to think beyond just getting the problem right and fosters their development into thoughtful reflective self motivated life long learners It stresses the what and why of elementary school mathematics content Hints are provided about how to teach the content but this is mostly left to courses and texts that are dedicated to that purpose The text is organized around the National Council for Teachers of Mathematics Principles and Standards for School Mathematics The Standards dictate the basic sections of the text Within each section appropriate specific topics are developed intertwined with technology problem solving assessment equity issues planning teaching skills use of manipulatives sequencing and much more In addition major focal points of the Standards are emphasized throughout effective teachers of mathematics should be able to motivate all students to learn should understand the developmental levels of how children learn should concentrate on what children need to become active participants in the learning environment and should be engaged in ongoing investigations of new mathematical concepts and teaching strategies Mathematics Content for Elementary Teachers is based on several fundamental premises The focus of mathematics education should be on the process not the answer Elementary teachers should know the mathematics content they are teaching know more than the content they are teaching and teach from the overflow of knowledge It is important for teachers to be flexible in allowing students to use different procedures teaching from the overflow of knowledge implies knowing how to do a given operation more than one way and being willing to examine many different ways Teachers need to learn to carefully cover the topics to be taught to reflect upon them and to be

able to organize them To help prospective elementary teachers concentrate on the mathematics content they will be expected to teach and begin to build the foundation for the methods they will use this text includes only elementary mathematics content and does not address middle school concepts Pedagogical features The text is organized according to NCTM Standards An informal writing style speaks directly to readers and is geared to pre service teachers Focus is given to multiple methods of problem solving at four developmental levels Questions exercises and activities are interspersed throughout each section rather than gathered at the end of each chapter Complete solutions for exercises are provided

Freitag, 2013-01-01 Freitag s MATHEMATICS FOR ELEMENTARY SCHOOL TEACHERS A PROCESS APPROACH was developed using the five Content Standards from the NCTM Principles and Standards for School Mathematics and the Common Core State Standards for Mathematics Traditionally books for pre service elementary teachers have focused on problem solving However problem solving is not the only process through which mathematics is learned It is also learned through mathematical reasoning communication representation and connections Recent trends in mathematics education now advocate implementing all five processes as a vital part of learning and doing mathematics Consequently you need to have concrete experiences with these processes that you will be required to teach The goal of this book is to treat each of the processes equitably by using an approach in which the five processes serve as the central pedagogical theme Most of the examples exercises and activities are designed to either model the processes or to directly engage you in working with them As a result you will not only come to understand the different processes but also appreciate them as an integral to learning and doing mathematics If this broader view can be instilled you are more likely to give your students a more well rounded and holistic view of mathematics once you enter the classroom The content of the book is directly related to the mathematics that is taught in grades K 8 The purpose is not to reteach elementary mathematics Rather the intent is to look at the content from a theoretical or generalized point of view so that you can better understand the concepts and processes behind the mathematics you will teach In short the book focuses on the why behind the mathematics in addition to the how Available with InfoTrac Student Collections <http://gocengage.com/infotrac> Important Notice Media content referenced within the product description or the product text may not be available in the ebook version *Handbook of Research on TPACK in the Digital Age* Niess, Margaret L., Gillow-Wiles, Henry, Angeli, Charoula, 2018-11-02 This title is an IGI Global Core Reference for
