Nguyen, Elizabeth Hull Barnes, Laura Wentworth, 2023-05-03 Create a pathway to equity by detracking mathematics The
tracked mathematics system has been operating in US schools for decades However research demonstrates negative effects
on subgroups of students by keeping them in a single math track thereby denying them access to rigorous coursework
needed for college and career readiness The journey to change this involves confronting some long standing beliefs and
structures in education When supported with the right structures instructional shifts coalition building and educator training
and support the detracking of mathematics courses can be a primary pathway to equity The ultimate goal is to increase more
students access to and achievement in higher levels of mathematics learning especially for students who are historically
marginalized Based on the stories and lessons learned from the San Francisco Unified School District educators who have
talked the talk and walked the walk this book provides a model for all those involved in taking on detracking efforts from
policymakers and school administrators to math coaches and teachers By sharing stories of real world examples lessons
learned and prompts to provoke discussion about your own context the book walks you through Designing and gaining
support for a policy of detracked math courses Implementing the policy through practical shifts in scheduling curriculum
professional development and coaching Supporting and improving the policy through continuous research monitoring and
maintenance This book offers the big ideas that help you in your own unique journey to advance equity in your school or
district s mathematics education and also provides practical information to help students in a detracked system thrive

Clelland, 2017-03-29 The method of moving frames originated in the early nineteenth century with the notion of the Frenet frame along a curve in Euclidean space Later Darboux expanded this idea to the study of surfaces The method was brought to its full power in the early twentieth century by Elie Cartan and its development

continues today with the work of Fels Olver and others This book is an introduction to the method of moving frames as developed by Cartan at a level suitable for beginning graduate students familiar with the geometry of curves and surfaces in Euclidean space The main focus is on the use of this method to compute local geometric invariants for curves and surfaces in various 3 dimensional homogeneous spaces including Euclidean Minkowski equi affine and projective spaces Later chapters include applications to several classical problems in differential geometry as well as an introduction to the nonhomogeneous case via moving frames on Riemannian manifolds The book is written in a reader friendly style building on already familiar concepts from curves and surfaces in Euclidean space A special feature of this book is the inclusion of detailed guidance regarding the use of the computer algebra system Maple to perform many of the computations involved in the exercises
