Mathematics for the Liberal Arts II Kathleen M. Galvin, 1999 *Visual Culture and Mathematics in the Early Modern Period* Ingrid Alexander-Skipnes, 2017-01-06 During the early modern period there was a natural correspondence between how artists might benefit from the knowledge of mathematics and how mathematicians might explore through advances in the study of visual culture new areas of enquiry that would uncover the mysteries of the visible world This volume makes its contribution by offering new interdisciplinary approaches that not only investigate perspective but also examine how mathematics enriched aesthetic theory and the human mind The contributors explore the portrayal of mathematical activity and mathematicians as well as their ideas and instruments how artists displayed their mathematical skills and the choices visual artists made between geometry and arithmetic as well as Euclid's impact on drawing artistic practice and theory These chapters cover a broad geographical area that includes Italy Switzerland Germany the Netherlands France and England The artists philosophers and mathematicians whose work is discussed include Leon Battista Alberti Nicholas Cusanus Marsilio Ficino Francesco di Giorgio Leonardo da Vinci and Andrea del Verrocchio as well as Michelangelo Galileo Piero della Francesca Girard Desargues William Hogarth Albrecht Dürer Luca Pacioli and Raphael

Algebra in Context Amy Shell-Gellasch, John Thoo, 2015-10-15 An engaging new approach to teaching algebra that takes students on a historical journey from its roots to modern times This book's unique approach to the teaching of mathematics lies in its use of history to provide a framework for understanding algebra and related fields With *Algebra in Context* students will soon discover why mathematics is such a crucial part not only of civilization but also of everyday life Even those who have avoided mathematics for years will find the historical stories both inviting and gripping The book's lessons begin with the creation and spread of number systems from the mathematical development of early civilizations in Babylonia Greece China Rome Egypt and Central America to the advancement of mathematics over time and the roles of famous figures such as Descartes and Leonardo of Pisa Fibonacci Before long it becomes clear that the simple origins of algebra evolved into modern problem solving Along the way the language of mathematics becomes familiar and students are gradually introduced to more challenging problems Paced perfectly Amy Shell Gellasch and J B Thoo's chapters ease students from topic to topic until they reach the twenty first century By the end of *Algebra in Context* students using this textbook will be comfortable with most algebra concepts including Different number bases Algebraic notation Methods of arithmetic calculation Real numbers Complex numbers Divisors Prime factorization Variation Factoring Solving linear equations False position Solving quadratic equations Solving cubic equations nth roots Set theory One to one correspondence Infinite sets Figurate numbers Logarithms Exponential growth Interest calculations

New Directions in Two-Year College Mathematics Donald J. Albers, Stephen B. Rodi, Ann E. Watkins, 2012-12-06 by Donald J Albers ix INTRODUCTION In July of 1984 the first national conference on mathematics education in two year colleges was held at Menlo College The conference was funded by the Alfred P Sloan Foundation Two year colleges account for more than one third of all undergraduate enrollments in mathematics and more than one half of all college freshmen are enrolled in two year colleges These two facts alone suggest the importance of mathematics education in two year colleges particularly to secondary schools four year colleges and universities For a variety of reasons four year colleges and universities are relatively unaware of two year colleges Arthur Cohen who was a participant at the New Directions conference warns Four year colleges and universities ignore two year colleges at their own peril Ross Taylor another conference participant encouraged two year college faculty to be ever mindful of their main source of students secondary schools and to work hard to strengthen their ties with them There are many other reasons why it was important to examine two year college mathematics from a national perspective 1 Over the last quarter century no other sector of higher education has grown so rapidly as have two year colleges Their enrollments tripled in the 60 s doubled in the 70 s and continue to increase rapidly in the 80 s x 2 Twenty five years ago two year colleges accounted for only one seventh of all undergraduate mathematics enrollments today the fraction is more than one third
