Recent Progress in Mathematical Psychology Cornelia E. Dowling, Fred S. Roberts, Peter Theuns, 2014-03-05

Mathematical psychology is an interdisciplinary area of research in which methods of mathematics operations research and computer science in psychology are used Now more than thirty years old the field has continued to grow rapidly and has taken on a life of its own This volume summarizes recent progress in mathematical psychology as seen by some of the leading figures in the field as well as some of its leading young researchers The papers presented in this volume reflect the most important current directions of research in mathematical psychology They cover topics in measurement decision and choice psychophysics and psychometrics knowledge representation neural nets and learning models and cognitive modeling Some of the major ideas included are new applications of concepts of measurement theory to social phenomena new directions in the theory of probabilistic choice surprising results in nonlinear utility theory applications of boolean methods in the theory of knowledge spaces applications of neural net ideas to concept learning developments in the theory of parallel processing models of response time new results in inhibition theory and new concepts about paired associate learning New Handbook of Mathematical Psychology: Volume 1, Foundations and Methodology William H. Roskam, 2012-12-06 This volume is the third volume of papers originating from the European Mathematical Psychology Group Earlier volumes were E Degreef J van Buggenhout Eds Trends In Mathematical Psychology Amsterdam North Holland Publ Cy 1984 and E E Roskam R Suck Eds Progress in Mathematical Psychology Amsterdam Elsevier Science Publ As the title indicates this volume presents work in progress which was reported in one of the recent annual meetings of the European Mathematical Psychology Group The Group finds it worthwhile to disseminate this work using a review process which is somewhat less strict and a publication lag which is shorter than would be the case for standard international journals The editor is happy that the meetings of the European Mathematical Psychology Group are regularly attended by colleagues from overseas Their contributions also appear in this volume as was the case in earlier volumes Despite apparent heterogeneity the reader will observe that European mathematical psychologists have a keen interest in basic issues of mathematical modeling and measurement theory and that also substantive topics such as decision making perception and performance are studied in the context of formal modeling Also and perhaps of more than casual importance for future developments is the fact that theory experiment and data analysis go closely together It should therefore not surprise that psychometric topics and topics in scaling are represented in this volume alongside with topics of a more purely mathematical nature      Frontiers of

Mathematical Psychology Donald R. Brown, J.E. Keith Smith, 2012-12-06 The papers in this volume were prepared after a preliminary symposium held at The University of Michigan in honor of Clyde Coombs Following the symposium each paper was extensively revised and in many instances completely rewritten to provide a timely and provocative survey of current works in mathematical psychology in the style of Clyde Coombs All of the authors were students or colleagues who were closely influenced by Coombs and our intention was not to cover all approaches to the field but rather to illustrate the continuing influence of Coombs's work and approach to the application of mathematics to basic psychological phenomena If we are successful it is because of his influence on the contributors v Acknowledgements The preparation of this volume in memory of Clyde Coombs owes much to the many friends students and colleagues of Clyde Coombs who generously provided their support and encouragement Funding was provided by Dean John D Arms of the Horace H      **Mathematical**

**Psychology** Jean-Paul Doignon, Jean-Claude Falmagne, 2012-12-06 Sometime in the late sixties one of the editors of this volume realized that the mathematical psychologists in Europe an odd lot mostly concentrated in Germany the Netherlands France England and Belgium were suffering from an acute sense of isolation The papers that they presented at meetings of their national or regional societies had to be sanitized to the point of misrepresentation They were misunderstood The mood was grim depression was lurking He decided that urgent action was required a European gathering of mathematical psychologists was called in April 1971 Not being foolhardy however he took the precaution of choosing Paris as the meeting place Around thirty mathematical psychologists received an invitation They all came justifying at least Paris's reputation The

meeting took place at the Maison des Belges of the Cite Universitaire Boulevard Jourdan in front of the Parc Montsouris As far as everyone remembers the meeting was a full success A happy birth had taken place This editor then irresponsibly accepted a position in a university in the US leaving an infant to the whims of the passers by Fortunately a godfather came along The next meeting took place in Nijmegen in November 1971 under the loving care of Eddy Roskam A tradition was established The third meeting was in Oxford 1972 then in Marseilles 1973 Regensburg 1974 Stirling 1975 Stockholm 1976 The infant became a toddler then a vigorous child This annual meeting is now an important event in the field
