[Critical, Transdisciplinary and Embodied Approaches in STEM Education](#) Pratim Sengupta,Marie-Claire Shanahan,Beaumie Kim,2019-12-16 Over the past decade integrated STEM education research has emerged as an international concern creating around it an imperative for technological and disciplinary innovation and a global resurgence of interest in teaching and learning to code at the K 16 levels At the same time issues of democratization equity power and access including recent decolonizing efforts in public education are also beginning to be acknowledged as legitimate issues in STEM education Taking a reflexive approach to the intersection of these concerns this book presents a collection of papers making new theoretical advances addressing two broad themes Transdisciplinary Approaches in STEM Education and Bodies Hegemony and Decolonization in STEM Education Within each

theme praxis is of central concern including analyses of teaching and learning that re imagines disciplinary boundaries and domains the relationship between Art and STEM and the design of learning technologies spaces and environments In addition to graduate research seminars at the Masters and PhD levels in Learning Sciences Science Education Educational Technology and STEM education this book could also serve as a textbook for graduate and pre service teacher education courses

Rational Numbers Thomas P. Carpenter, Elizabeth Fennema, Thomas A. Romberg, 2012-10-12 Until recently there had been relatively little integration of programs of research on teaching learning curriculum and assessment However in the last few years it has become increasingly apparent that a more unified program of research is needed to acquire an understanding of teaching and learning in schools that will inform curriculum development and assessment The chapters in this volume represent a first step toward an integration of research paradigms in one clearly specified mathematical domain Integrating a number of different research perspectives is a complex task and ways must be found to reduce the complexity without sacrificing the integration The research discussed in this volume is tied together because it deals with a common content strand During the last ten years specific content domains have served as focal points for research on the development of mathematical concepts in children The areas of addition and subtraction algebra rational numbers and geometry are notable examples Whether a similar organizational structure will prevail for programs of research that integrate the study of teaching learning curriculum and assessment is an open question The perspectives presented in this volume illustrate the potential for adopting this perspective
