Matrix Metalloproteinase Protocols:

Matrix Metalloproteinase Protocols Ian M. Clark, 2008-02-05 Research in the matrix metalloproteinase field began with the demonstration by Gross and Lapi re in 1962 that resorbing tadpole tail expressed an enzyme that could degrade collagen gels These humble beginnings have led us to the elucidation of around twenty distinct vertebrate MMPs along with a variety of homologs from such diverse organisms as sea urchin plants nematode worm and bacteria This coupled with four known specific inhibitors of MMPs the TIMPs gives a complex picture Part I of Matrix Metalloproteinase Protocols provides the reader with a selective overview of the MMP arena and a chance to come to grips with where the field has been where it is and where it is going I hope that this complements all of the methodology that comes later Part II presents the reader with a diverse set of methods for the expression and purification of MMPs and TIMPs bringing together the long and often hard earned experience of a number of researchers Part III allows the reader to detect MMPs and TIMPs at both the protein and mRNA level whereas Part IV gives the ability to assay MMP and TIMP activities in a wide variety of circumstances *Matrix Metalloproteinase Biology* Irit Sagi, Jean Gaffney, 2015-08-03 Discussing recent advances in the field of matrix metalloproteinase MMP research from a multidisciplinary perspective Matrix Metalloproteinase Biology is a collection of chapters written by leaders in the field of MMPs The book focuses on the challenges of understanding the mechanisms substrate degradation by MMPs as well as how these enzymes are able to degrade large highly ordered substrates such as collagen All topics addressed are considered in relation to disease progression including roles in cancer metastasis rheumatoid arthritis and other inflammatory diseases The text first provides an overview of MMPs focusing on the history the development and failures of small molecule inhibitors in clinical trials and work with TIMPs the endogenous inhibitors of MMPs These introductory chapters establish the foundation for later discussion of the recent progress on the design of different types of inhibitors including novel antibody based therapeutics The following section emphasizes research using novel methods to further the study of the MMPs The third and final section focuses on in vivo research particularly with respect to cancer models degradation of the extracellular matrix and MMP involvement in other disease states Written and edited by leaders in the field Matrix Metalloproteinase Biology addresses the rapidly growth in MMP research and will be an invaluable resource to advanced students and researchers studying cell and molecular biology The Role of Matrix Metalloproteinase in Human Body Pathologies Francesco Travascio, 2017-12-20 Matrix metalloproteinases MMPs are a family of proteolytic zinc containing enzymes involved in physiological as well as in pathological processes in the human organism MMPs play a key role in the remodeling of the extracellular matrix Such a process may occur because of tissue homeostasis morphogenesis and tissue repair However remodeling could also be a part of many pathological states such as arthritis cardiovascular diseases neurodegenerative diseases or impaired development in congenital anomalies This book overviews the role of MMPs in different pathologies affecting the human body **Handbook of Proteolytic Enzymes** Alan J.
