branding has propelled specific kinds of approach to the status and selling of film Analyzing the practice of branding the poetics of corporate logos and the industrial politics surrounding the development of branded texts properties and spaces including franchises ranging from Looney Tunes to Lord of the Rings and Harry Potter to The Matrix Grainge considers the relation of branding to the emergent principle of total entertainment Employing an interdisciplinary method drawn from film studies cultural studies and advertising and media studies Brand Hollywood demonstrates the complexities of selling entertainment in the global media moment providing a fresh and engaging perspective on branding s significance for Computing the Optical Properties of Large Systems commercial film and the industrial culture from which it is produced Tim Joachim Zuehlsdorff, 2015-06-05 This work addresses the computation of excited state properties of systems containing thousands of atoms To achieve this the author combines the linear response formulation of time dependent density functional theory TDDFT with linear scaling techniques known from ground state density functional theory This extends the range of TDDFT which on its own cannot tackle many of the large and interesting systems in materials science and computational biology The strengths of the approach developed in this work are demonstrated on a number of problems involving large scale systems including exciton coupling in the Fenna Matthews Olson complex and the investigation of low lying excitations in doped p terphenyl organic crystals The Comic Book Film Adaptation Liam Burke, 2015-03-31 In the summer of 2000 X Men surpassed all box office expectations and ushered in an era of unprecedented production of comic book film adaptations This trend now in its second decade has blossomed into Hollywood's leading genre From superheroes to Spartan warriors The Comic Book Film Adaptation offers the first dedicated study to examine how comic books moved from the fringes of popular culture to the center of mainstream film production Through in depth analysis industry interviews and audience research this book charts the cause and effect of this influential trend It considers the cultural traumas business demands and digital possibilities that Hollywood faced at the dawn of the twenty first century. The industry managed to meet these challenges by exploiting comics and their existing audiences However studios were caught off guard when these comic book fans empowered by digital media began to influence the success of these adaptations Nonetheless filmmakers soon developed strategies to take advantage of this intense fanbase while codifying the trend into a more lucrative genre the comic book movie which appealed to an even wider audience Central to this vibrant trend is a comic aesthetic in which filmmakers utilize digital filmmaking technologies to engage with the language and conventions of comics like never before The Comic Book Film Adaptation explores this unique moment in which cinema is stimulated challenged and enriched by the once dismissed medium of comics Digital Libraries: The Era of Big Data and Data Science Michelangelo Ceci, Stefano Ferilli, Antonella Poggi, 2020-01-22 This book constitutes the thoroughly refereed proceedings of the 16th Italian Research Conference on Digital Libraries IRCDL 2020 held in Bari Italy in January 2020 The 12 full papers and 6 short papers presented were carefully selected from 26 submissions. innovative imagery of contemporary Hollywood cinema but in some ways has surpassed it in status and privilege because of the emergence of sound design This in depth study by William Whittington considers the evolution of sound design not only through cultural and technological developments during the last four decades but also through the attitudes and expectations of filmgoers Fans of recent blockbuster films in particular science fiction films have come to expect a more advanced and refined degree of film sound use which has changed the way they experience and understand spectacle and storytelling in contemporary cinema. The book covers recent science fiction cinema in rich and compelling detail providing a new sounding of familiar films while offering insights into the constructed nature of cinematic sound design This is accomplished by examining the formal elements and historical context of sound production in movies to better appreciate how a film sound track is conceived and presented Whittington focuses on seminal science fiction films that have made specific advances in film sound including 2001 A Space Odyssey THX 1138 Star Wars Alien Blade Runner original version and director s cut Terminator 2 Judgment Day and The Matrix trilogy and games milestones of the entertainment industry s technological and aesthetic advancements with sound Setting itself apart from other works the book illustrates through accessible detail and compelling examples how swiftly such advancements in film sound aesthetics and technology have influenced recent science fiction cinema and examines how these changes correlate to the history theory and practice of contemporary Hollywood Racial Stigma on the Hollywood Screen from World War II to the Present Brian Locke, 2009-11-23 Racial filmmaking Stigma on the Hollywood Screen from WWII to the Present charts how the dominant white and black binary of American racial discourse influences Hollywood's representation of the Asian The Orientalist buddy film draws a scenario in which two buddies one white and one black transcend an initial hatred for one another by joining forces against a foreign Asian menace Alongside an analysis of multiple genres of film Brian Locke argues that this triangulated rendering of race ameliorates the longstanding historical contradiction between U S democratic ideals and white America's persistent domination over blacks
