Oil Wealth And The Fate Of Tropical Rainforests:

Oil Wealth and the Fate of the Forest Sven Wunder, 2005-08-16 Reduction in the size of the world's remaining rainforests is an issue of huge importance for all societies. This new book, an analysis of the impact of oil wealth on tropical deforestation in South America, Africa, and Asia, takes a much more analytical approach than the usual fare of environmental studies. The focus on economies as a whole leads to a more balanced view than those that are often put forward and therefore vitally a view that is more valid. Of use to those who study environmental issues and economics, this book is potentially an indispensable tool for policy makers the world over. *Oil Wealth and the Fate of the Forest* Sven Wunder, 2003

The Future of Helium as a Natural Resource William J. Nuttall, Richard H. Clarke, Bartek Andrzej Glowacki, 2012 The book reveals the changing dynamics of the helium industry on both the supply side and the demand side. The helium industry has a long term future and this important gas will have a role to play for many decades to come. Major new users of helium are expected to enter the market especially in nuclear energy, both fission and fusion. Prices and volumes supplied and expected to rise and this will prompt greater efforts towards the development of new helium sources and helium conservation and recycling. Preference Data for Environmental Valuation John Whitehead, Tim Haab, Ju-Chin Huang, 2012-03-15

The monetary valuation of environmental goods and services has evolved from a fringe field of study in the late 1970s and early 1980s to a primary focus of environmental economists over the past decade. Despite its rapid growth, practitioners of valuation techniques often find themselves defending their practices to both users of the results of applied studies and perhaps more troubling to other practitioners. One of the more heated threads of this internal debate over valuation techniques revolves around the types of data to use in performing a valuation study. In the infant years of the development of valuation techniques, two schools of thought emerged: the revealed preference school and the stated preference school, the latter of which is perhaps most associated with the contingent valuation method. In the midst of this debate, an exciting new approach to non-market valuation was developed in the 1990s: a combination and joint estimation of revealed preference and stated preference data. There are two primary objectives for this book. One objective is to fill a gap in the non-market valuation primer literature. A number of books have appeared over the past decade that develop the theory and methods of non-market valuation, but each takes an individual non-market valuation method approach. This book considers each of these valuation methods in combination with another method. These relationships can be exploited econometrically to obtain more valid and reliable estimates of willingness to pay relative to the individual methods. The second objective is to showcase recent and novel applications of data combination and joint estimation via a set of original state-of-the-art studies that are contributed by leading researchers in the field. This book will be accessible to economists and consultants working in business or government as well as an invaluable resource for researchers and students alike. *The Cooperation Challenge of Economics and the Protection of Water Supplies* Joan Hoffman, 2010-04-05 In this book, Joan Hoffman examines the

watershed collaboration from an economic perspective as well as the possibility of alternative means of water protection such as regulation The case is examined in the light of similar collaborations elsewhere in the world **Environmental**

Amenities and Regional Economic Development Todd L. Cherry, Dan Rickman, 2009-12-04 Rising U S income and wealth in recent decades have fueled an increase in consumption demand for environmental amenities Many observers and researchers have argued that this at least in part underlies current differentials in economic growth across regions This collection of key articles addresses the issues and more *New Perspectives on Agri-environmental Policies* Stephan J

Goetz, Floor Brouwer, 2009-10-20 Significant advances have occurred in recent years in Europe and in North America in addressing agri environmental policies Land use issues tend to be more pressing in Europe than in the US as a whole because of different spatial exigencies Because these advances have taken place within individual academic disciplines there has been something of a loss of synergy and often efforts are duplicated While important institutional and legal differences still exist between the two continents the sharing of recent scientific advances will benefit scientists on both sides of the Atlantic and this is the main purpose of this book The authors aim to identify options for policy to overcome the challenges ahead synthesize existing knowledge and identify gaps in current knowledge This is aided by the adoption of a properly comparative approach **Forests and Development** Philippe Delacote, 2012-04-27 This book is a fully up to date study of

the major issues facing forest conservation and the forestry industry which considers developments at local national and global levels Environmental and development topics relating to each level are discussed for instance the use of forest products in a rural poverty context corruption and forest harvesting and consumption as a political device Delacote employs a quantitative approach in order to analyse the plight of tropical forests in the developing world and in doing so produces a range of interesting conclusions This methodology fills a crucial research gap in existing studies of forests in a development context increased use of theoretical tools to interpret real life situations might be beneficial to the field Therefore the first objective of this book is to provide a sample of theoretical analysis concerning the forests and development nexus The second objective is to supply empirical economists with new theoretical insights with the hope that those results can emerge with conclusive field testing and relevant policy recommendations **Economic Growth and Environmental Regulation** Tim

Swanson, Tun Lin, 2009-12-04 This volume assembles a group of eminent scholars to look at the problem of growth and environment from the perspective of environmental regulation The questions addressed are How does economic growth interact with regulation and what are the best approaches to regulation in use today The context for the volume is the current situation in China where twenty years of rapid growth have created a situation in which there are both demands for environmental regulation and needs for choosing a future development path The advent of A Macro Environmental Strategy for China presents an opportunity to ask how and why China should introduce regulation into its management of its development The volume includes contributions from leading Chinese experts and established environmental economists

from other countries including Timo Goeschl Ben Groom and Andreas Kontoleon The volume looks at both the demand side of environmental regulation and the supply side The demand side of regulatory intervention examines how regulation operates to supplement existing resource allocation mechanisms via effective demand aggregation and implementation mechanisms The supply side of regulation examines how regulation operates to guide industrial growth down particular pathways in the pursuit of managed development Both sides of environmental regulation involve the important issue of implementation and enforcement This volume will be of most value to academics and scholars of environmental economics growth economics the Chinese economy and policy makers of environmental regulations CIFOR annual report 2003 Center for International Forestry Research, Cifor, 2004-01-01 Message from the chairman of the board and the director General Celebrating 10 years of forest research Forests and livelihoods Environmental services Forests and governance How we work Donors Financial statements Collaborators Staff and consultants Board of trustees Publications **Land Use, Nature Conservation and the Stability of Rainforest Margins in Southeast Asia** Gerhard Gerold, Michael Fremerey, Edi Guhardja, 2013-06-29 Southeast Asia constitutes one of the world's most extended rainforest regions It is characterized by a high degree of biodiversity and contains a large variety of endemic species Moreover these forests provide a number of important and singular ecosystem services like erosion protection and provision of high quality water which cannot be replaced by alternative ecosystems However various forms of encroachment mostly those made by human interventions seriously threaten the continuance of rainforests in this area There is ample evidence that the rainforest resources apart from large scale commercial logging are exposed to danger particularly from its margin areas These areas which are characterized by intensive man nature interaction have been identified as extremely fragile systems The dynamic equilibrium that balances human needs and interventions on the one hand and natural regeneration capacity on the other is at stake The decrease of rainforest resources is to a substantial degree connected with the destabilization of these systems Accordingly the search for measures and processes which prevent destabilization and promote stability is regarded as imperative This refers to both the human and the natural part of the forest margin ecosystem *The World Bank Research Observer*, 2004 *Ecological Economics and Industrial Ecology* Jakub Kronenberg, 2007-03-29 Holistic in approach and rooted in the real world Ecological Economics and Industrial Ecology presents a new way of looking at environmental policy exploring the relationship between ecological economics and industrial ecology Concentrating on the conceptual background of ecological economics and industrial ecology this book provides a selection *Environmental Sustainability* Raghubendra Jha, K.V. Bhanu Murthy, 2006-09-27 With globalization fast becoming an irreversible process it is necessary to pay increased attention to the implications for environmental sustainability However the so called environmental Kuznets curve EKC argument implies that rapid economic growth in many developing countries should be environmentally unsustainable Environmental Sustainability addresses this dichotomy and articulates a notion of consumption sustainability that is both universal and pertains to the indefinite future

Additionally it emphasizes the importance of addressing a broad spectrum of sources of environmental degradation and relates this measure to an index of economic achievement more complete than per capita income As well as the EKC authors Jha and Murthy also critique the Environmental Sustainability Index ESI and empirically substantiate the proposition that a certain type of development in the presently high income countries is primarily responsible for global environmental degradation Several policy conclusions for global environmental management are also advanced Throughout Jha and Murthy comprehensively evaluate existing approaches to environmental sustainability and critically review empirical studies of environmental degradation and economic development making this an invaluable source of information for those concerned with environmental economics and political economy Environmental Economics, Experimental Methods Todd L. Cherry,Stephan Kroll,Jason Shogren,2007-12-20 The experimental method is one commonly applied to issues of environmental economics this book brings together 63 leading researchers in the area and their latest work exploring the behavioural underpinnings of experimental environmental economics The essays in this volume will be illuminating for both researchers and practitioners specific **Alternatives for Environmental Valuation** Michael Getzner,Clive Spash,Sigrid Stagl,2004-10-21 How can we value the environment this is the crucial issue that this book debates The critical analyses carried out within the book by such figures as Nick Hanley and Jonathan Aldred are vital to ensuring that future economic growth is not achieved at the expense of our environment **Waste and Environmental Policy** Massimiliano Mazzanti,Anna Montini,2009-03-23 This research deals with the increasingly complex issues of waste generation waste management and waste disposal that in less developed industrialised countries present diverse but critical concerns It takes a socio economic and policy oriented perspective and provides empirical evidence at EU and regional level The EU and Italy are taken as relevant case studies given the disparities in environmental performances between less and more developed areas The rich and various empirical evidence shows that a robust delinking between waste generation and economic growth is still not present thus future policies should directly address the problem at the source by targeting waste generation in EU countries Some structural factors like population density and urbanisation present themselves as relevant drivers of both waste management and landfill diversion Nevertheless economic and structural factors alone are not sufficient to improve waste performances Though waste policies are to be redesigned by covering the entire area of waste management some first signals of policy effectiveness are arising This work will be of most interest to those students of environmental economics and environmental sciences as well as policy makers waste utility managers and companies in the waste management sector

Game Theory and Policy Making in Natural Resources and the Environment Ariel Dinar,José Albiac,Joaquín Sánchez-Soriano,2008-01-31 This book includes chapters by experts from developing and developed countries that apply game theory to issues in natural resources and the environment demonstrating the usefulness of game theory in policy making and appealing to a wide audience **Biotechnology and Agricultural Development** Rob Tripp,2009-06-02 This

book addresses the continuing controversy over the potential impact of genetically modified GM crops in developing countries Supporters of the technology claim it offers one of the best hopes for increasing agricultural production and reducing rural poverty while opponents see it as an untested intervention that will bring corporate control of peasant farming The book examines the issues by reviewing the experience of GM insect resistant cotton the most widely grown GM crop in developing countries The book begins with an introduction to agricultural biotechnology a brief examination of the history of cotton production technology and the institutions required to support that technology and a thorough review of the literature on the agronomic performance of GM cotton It then provides a review of the economic and institutional outcomes of GM cotton during the first decade of its use The core of the book is four country case studies based on original fieldwork in the principal developing countries growing GM cotton China India South Africa and Colombia The book concludes with a summary of the experience to date and implications for the future of GM crops in developing countries This review challenges those who have predicted technological failure by describing instances in which GM cotton has proven useful and has been enthusiastically taken up by smallholders But it also challenges those who claim that biotechnology can take the lead in agricultural development by examining the precarious institutional basis on which these hopes rest in most countries The analysis shows how biotechnology's potential contribution to agricultural development must be seen as a part of and often secondary to more fundamental policy change The book should be of interest to a wide audience concerned with agricultural development This would include academics in the social and agricultural sciences donor agencies and NGOs

Agrobiodiversity Conservation and Economic Development Andreas Kontoleon, Unai Pascual, Melinda Smale, 2008-10-03
This book reflects current developments in the economics of agrobiodiversity and focuses its attention on the role agrobiodiversity can have for economic development As a new and rapidly expanding subfield at the interface of environmental ecological agricultural and development economics the editors and contributors to this volume provide a thorough structured and authoritative coverage of this field Topics covered include the economic modelling of agrobiodiversity policy and governance solutions for the conservation of biodiversity in agricultural landscapes contracts markets and valuation The authors include well known and respected academics and researchers who have a real policy perspective into the role of agrobiodiversity and economic development The book provides coherent and up to date coverage of the economics of in situ agrobiodiversity conservation which is to a large extent currently absent Though the material in the volume is primarily written for economists its content and style are highly relevant and accessible to ecologists and conservation biologists and to academics from other broad disciplines that are located within the areas of economics and ecology
