Representation Of Place:

Place/Culture/Representation James S. Duncan, David Ley, 2013-04-15 Spatial and cultural analysis have recently found much common ground focusing in particular on the nature of the city Place Culture Representation brings together new and established voices involved in the reshaping of cultural geography The authors argue that as we write our geographies we are not just representing some reality we are creating meaning Writing becomes as much about the author as it is about purported geographical reality The issue becomes not scientific truth as the end but the interpretation of cultural constructions as the means Discussing authorial power discourses of the other texts and textuality landscape metaphor the sites of power knowledge relations and notions of community and the sense of place the authors explore the ways in which a more fluid and sensitive geographer's art can help us make sense of ourselves and the landscapes and places we inhabit and think about

Representing Place Edward S. Casey, 2002-01-01 You are here a map declares but of course you are not any more than you truly occupy the vantage point into which a landscape painting puts you How maps and paintings figure and reconfigure space as well as our place in it is the subject of Edward S Casey's study an exploration of how we portray the world and its many places Casey's discussion ranges widely from Northern Song landscape painting to nineteenth century American and British landscape painting and photography from prehistoric petroglyphs and medieval portolan charts to seventeenth century Dutch cartography and land survey maps of the American frontier From these culturally and historically diverse forays a theory of representation emerges Casey proposes that the representation of place in visual works be judged in terms not of resemblance but of reconnecting with an earth and world that are not the mere content of mind or language a reconnection that calls for the embodiment and emplacement of the human subject Book jacket

Representation in Cognitive Science Nicholas Shea, 2018-10-04 Our thoughts are meaningful We think about things in the outside world how can that be so This is

one of the deepest questions in contemporary philosophy Ever since the cognitive revolution states with meaning mental representations have been the key explanatory construct of the cognitive sciences But there is still no widely accepted theory of how mental representations get their meaning Powerful new methods in cognitive neuroscience can now reveal information processing in the brain in unprecedented detail They show how the brain performs complex calculations on neural representations Drawing on this cutting edge research Nicholas Shea uses a series of case studies from the cognitive sciences to develop a naturalistic account of the nature of mental representation His approach is distinctive in focusing firmly on the subpersonal representations that pervade so much of cognitive science The diversity and depth of the case studies illustrated by numerous figures make this book unlike any previous treatment It is important reading for philosophers of psychology and philosophers of mind and of considerable interest to researchers throughout the cognitive sciences

Visual and Linguistic Representations of Places of Origin Maria Pia Pozzato, 2017-12-05 This book is about the representations both visual and linguistic which people give of their own places of origin It examines the drawings of interviewees who were asked to draw their own place of origin on a white A3 sheet using pencil or colour according to their choice If they were born in a place they did not remember because they moved in when they were very small they could draw the place they did remember as the scenario of their early childhood The drawings are examined from three different perspectives semiotics cognitive psychology and geography The semiotic instruments are used to describe how each person reconstructs a complex image of his/her childhood place and how they translate their own memories from one language to another e.g. from drawing to verbal story trying to approach what they want to express in the best possible way The cognitive psychological point of view helps clarify the emotional world of the interviewees and their motivations during the process of reconstruction and expression of their childhood experiences The geographical conceptualizations concern a cultural level and provide insight into the cartographic models that inspire the maps people drew One of the main findings was the influence from cultural codes as demonstrated in the fact that most of the US students interviewed drew their maps showing considerable cartographic expertise in comparison to their European counterparts

Landscape and

Space Jaś Elsner, 2021-11-25 Landscape has been a key theme in world archaeology and trans cultural art history over the last half century particularly in the study of painting in art history and in all questions of human intervention and the placement of monuments in the natural world within archaeology However the representation of landscape has been rather less addressed in the scholarship of the archaeologically accessed visual cultures of the ancient world The kinds of reliefs objects and paintings discussed here have a significant purchase on matters concerned with landscape and space in the visual sphere but were discovered within archaeological contexts and by means of excavation Through case studies focused on the invention of wilderness imagery in ancient China the relation of monuments to landscape in ancient Greece the place of landscape painting in Mesoamerican Maya art and the construction of sacred landscape across Eurasia between Stonehenge and the Silk Road via Pompeii this book emphasises the importance of thinking about models of landscape in ancient art as well as the value of comparative approaches in underlining core aspects of the topic Notably it explores questions of space both actual and conceptual including how space is configured through form and representation A New Law Dictionary and Institute of the Whole Law Archibald Brown, 1880 **The Revised Civil Code of the State of Louisiana** Louisiana, 1875 Realism's Others Eva Aldea, Geoffrey Baker, 2010-07-12 For at least a century scholarship on realist narrative and occasional polemics against realist narrative have assumed that realism promotes the values of sameness against those of otherness and that it does so by use of a narrative mode that excludes certain epistemologies ideologies and ways of thinking However the truth is more complex than that as the essays in this volume all demonstrate *Realism's Others* examines the various strategies by which realist narratives create the idea of difference whether that difference is registered in terms of class ethnicity epistemology nationality or gender The authors in this collection examine in detail not just the fact of otherness in some canonical realist and canonical magical realist and postmodern novels but the actual means by which that otherness is established by the text These essays suggest that neither realist narrative nor narratives positioned as anti realist take otherness for granted rather the texts discussed here actively create difference and this creation of difference often occasions severe difficulties for the novels representational schema How does one represent different types of knowledge other aesthetic modes or other spaces for example in texts whose epistemology has long been seen as secular and empirical whose aesthetic mode has always been approached as pure descriptive mimesis and whose settings are largely domestic These essays all begin with a certain collision of nationalities of classes of representational matrices of religions and go on to chart the challenges that this collision presents to our ideas or stereotypes of realism or to the possibilities of writing against and beyond realism This question motivates examination of key realist or social realist texts in some of these essays by Honoré de Balzac George Eliot Franz Grillparzer Theodor Storm Gottfried Keller Theodor Fontane Wilhelm Raabe María Amparo Ruiz de Burton Henry James William Dean Howells Charles Chesnutt Theodore Dreiser H T Tsiang Alan Sillitoe and Richard Yates However it is no less central a question in certain non realist texts which

engage realist aims to a surprising degree often to debate them openly some of these essays discuss in this light fantastic magical realist and postmodern works by Abram Tertz Paul Auster Alejo Carpentier Toni Morrison Gabriel Garc a M rquez Salman Rushdie and A S Byatt Realism becomes more than an aesthetic aim or narrative mode It becomes rather a value evoked and discussed by all of the works analyzed here in order to reveal its impact on fiction s treatment of ethnicity nationality ideology space gender and social class
