Reproduction Technology And Rights:

Reproduction, Technology, and Rights James M. Humber, Robert F. Almeder, 1996-01-01 In *Reproduction Technology and Rights* philosophers and ethicists debate the central moral issues and problems raised by today's revolution in reproductive technology. Leading issues discussed include the ethics of paternal obligations to children, the place of in vitro fertilization in the allocation of health care resources, and the ethical implications of such new technologies as blastomere separation and cloning. Also considered are how parents and society should respond to knowledge gained from prenatal testing and whether or not the right to abort should relieve men of the duty to support unwanted children. *Reproduction Technology and Rights* illuminates the moral and ethical choices that our society faces because of advances in reproductive technology and helps to make those decisions better informed.

Assisted Reproductive Technology Charles P. Kindregan, Maureen McBrien, 2006 As more people turn to assisted reproduction, the legal issues surrounding it have become increasingly complex. Beyond representing patients or clinics, numerous legal problems are arising from the technology's application. Disputes in divorce are the most common, but this technology impacts the law in other areas including personal injury, insurance, criminal law, and estate planning. Drawing from multiple legal sources, this book presents complex information in a direct, balanced, and fair manner. It includes a glossary, sample forms, and checklists, and a bibliography.

Ethical Dilemmas in Assisted Reproductive Technologies Joseph G. Schenker, 2011-08-29 Assisted reproductive technologies (ART) include the artificial or partially artificial methods to achieve pregnancy. These new technologies lead to substantial changes regarding ethical and legal aspects in reproductive medicine. The book focuses on current hot topics about ethical dilemmas in ART, e.g., about the duties of ethical committees, guidelines regarding informed consent, ethical and legal aspects of sperm donation, embryo donation, ethics of embryonic stem cells, therapeutical cloning, patenting of human genes, commercialization.

The Oxford Handbook of Reproductive Ethics Leslie Francis, 2017 Intimate and medicalized natural and technological reproduction poses some of the most challenging ethical dilemmas of our time. This volume brings together scholars from multiple perspectives to address both traditional and novel questions about the rights and responsibilities of human reproducers, their caregivers, and the societies

This book therefore consists of case studies from eight European countries which provide insights into the status and development of the regulation of ART in the last 40 years. The country cases from all over Europe and the three comparative chapters provide insights into the diversity of current ART regulation across the continent as well as into similarities, differences and trends in this regulatory area. This book will be of interest to practitioners of ART who are interested in understanding the differences in regulation of ART in Europe as well as long term trends in this respect. Given the ethical and legal implications, the book explores it will also be of interest to students or researchers in the fields of social sciences, humanities and law.

Women and New Reproductive Technologies Judith Rodin, Aila Collins, 2013-01-11. Although major breakthroughs in reproductive technology have created dramatic opportunities for many people, they are not without problems. More significant than the question of whether the technologies are good or bad, however, is for whom they are good, in what instances, and to whom they should be made accessible. These issues can be debated at multiple levels, from the ethical implications to the social and psychological consequences for society and for the individual to the legal and medical outcomes. Each chapter highlights a different array of problems and benefits while emphasizing four major themes: the impact of technology on women's lives, the role of women, the individual versus society, and the fetus as patient.

New Reproductive Technologies and Disembodiment Carla Lam, 2016-04-22. With attention to the ways in which new reproductive technologies facilitate the gradual disembodiment of reproduction, this book reveals the paradox of women's reproductive experience in patriarchal cultures as being both and often simultaneously empowering and disempowering. A rich exploration of birth appropriation in the West, *New Reproductive Technologies and Disembodiment* investigates the assimilation of women's embodied power into patriarchal systems of symbolism, culture, and politics through the inversion of women's and men's reproductive roles. Contending that new reproductive technologies represent another world-historical moment both in their forging of novel social relations and material processes of reproduction and their manner of disembodying women in unprecedented ways, a disembodiment evident in recent visual and literary popular and academic texts, this volume locates the roots of this disembodiment in western political discourse. A call to feminist political theory to remember the material dimensions of bodies and their philosophical significance, *New Reproductive Technologies and Disembodiment* will appeal to scholars of sociology, gender studies, political and social theory, and the study of science, technology, and health.

Saviour Siblings and the Regulation of Assisted Reproductive Technology Malcolm K. Smith, 2016-03-03. Advances in the field of Assisted Reproductive Technology (ART) have been revolutionary. This book focuses on the use of ARTs in the context of families who seek to conceive a matching sibling donor as a source of tissue to treat an existing sick child. Such children have been referred to as saviour siblings. Considering the legal and regulatory frameworks that impact on the accessibility of this technology in Australia and the UK, the work analyses the ethical and moral issues that arise from the use of the technology for this specific purpose. The author claims the only justification for limiting a family's

reproductive liberty in this context is where the exercise of reproductive decision making results in harm to others. It is argued that the harm principle is the underlying feature of legislative action in Western democratic society and as such this principle provides the grounds upon which a strong and persuasive argument is made for a less restrictive regulatory approach in the context of saviour siblings. The book will be of great relevance and interest to academics, researchers, practitioners and policy makers in the fields of law, ethics, philosophy, science and medicine.

Issues in Reproductive Technology Helen B. Holmes, 1994-08. A remarkable collection of scholarly essays, philosophical discussions and ethical arguments concerning reproductive choices. Choice. It seems as if every week there is a new case involving reproductive technologies that raises provocative, often painful questions. What policies should be followed by centers that preserve human embryos? Are such innovations as Norplant improvements over established methods of contraception? Should RU-486 be available in the U.S.? Is prenatal diagnosis an ethically acceptable step to limiting the number of disabled people? These are just some of the vital questions explored in this timely work, which offers incisive analysis of the plethora of issues raised by advances in reproductive medicine. The book's major sections cover abortion, contraception, cryopreservation of gametes and embryos, surrogate motherhood and psychosocial issues of in vitro fertilization. In each section, introductory essays by recognized authorities such as Elizabeth Bartholet and Andrea L. Bonnicksen are followed by critical articles by professionals in such fields as women's health, medicine, biology, sociology, politics and philosophy. In assessing a technology, the authors present well-argued analyses of problems created by that technology, including views from advocates and practitioners that raise attendant ethical and practical issues.

Reproductive Health and Assisted Reproductive Technologies In Sub-Saharan Africa Olanike S. Adelakun, Erebi Ndoni, 2023-08-28. This book focuses on reproductive health rights and assisted reproductive technologies (ART) in sub-Saharan Africa. Each chapter is connected to the other by focusing on different aspects of ART as a means of achieving conception. Topics such as regulation of ART practices, surrogacy and specific aspects of ART, which are gradually becoming acceptable but largely unregulated in Africa, promises to be of interest to scholars, researchers and fertility practitioners. Research in the book takes a rights-based approach and ethical analysis of ART practice in sub-Saharan Africa by authors from diverse backgrounds, bringing together law and society perspectives. Readers stand to gain new knowledge on the societal, legal, medical and psychological requirements, effects and challenges of reproductive health rights and ART in the African context. The book is also relevant to UN Sustainable Development Goal 3: Good Health and Well-being, given that it promotes and advocates for access to reproductive healthcare for persons who have difficulty or are unable to conceive without medical assistance.
