Gursaran Talwar, 2013-03-09 Contraceptive research has entered the new age of vaccines Realistic prospects exist for the development of an entirely new battery of vaccines for use in human and veterinary medicine Among them may be anti fertility vaccines based on physiological mechanisms applicable to either the female or male This volume is a comprehensive review a status report of the subjects including fundamental work on the search for useful epitopes and ranging to applied vaccinology One vaccine to prevent pregnancy for use by women has already been studied extensively G P Talwar the volume's editor and his colleagues in New Delhi India published in 1976 a landmark series of papers describing the immunological properties of a preparation consisting of the alum precipitated beta subunit of human chorionic gonadotropin hCG chemically linked to tetanus toxoid The principle of enhancing antigenicity of a self protein by linkage of the epitope to a carrier protein was employed and tested clinically These trials carried out under the auspices of the Indian Council for Medical Research were the first application of the carrier protein concept for a vaccine for human use The encouraging results stimulated a wave of research not only on the use of hCG based vaccines but on other antigens as well **Science of Caring**, 1993

Progress in Hormone Biochemistry and Pharmacology M. Briggs, A. Corbin, 2012-12-06 Somatostatin was discovered in 1971 by Guillemin and his colleagues during their search for the hypothalamic growth hormone releasing factor A peptide was found in ovine hypothalamus which inhibited the release of growth hormone from cultured anterior pituitary cells 1 2

Determination 3 of its amino acid sequence indicated that it was a tetradecapeptide with a molecular weight of 1639 Figure 1J An identical peptide was later isolated from porcine hypothalamus by Schally and his coworkers 4 The peptide was named somatostatin in the belief that it was a hypothalamic releasing factor whose sole function was to inhibit the secretion of growth hormone It soon became evident however that a peptide with identical immunologic characteristics and biologic activity was present in the D cells of pancreatic islets in D like cells of the gastrointestinal tract in parafollicular cells of the thyroid gland and in extrahypo thalamic neurons of both the central and peripheral nervous system in various species including man Moreover studies employing synthetic somatostatin⁵ demonstrated that the peptide possessed a wide spectrum of biologic activities in addition to its inhibition of growth hormone

The Body Lisa Jean Moore, Monica Casper, 2014-11-06 This college level handbook offers a comprehensive and accessible overview of sociological and cultural perspectives on the human body Organized along the lines of a standard anatomical textbook delineated by body parts and processes this volume subverts the expected content in favor of providing tools for social and cultural analysis Students will learn about the human body in its social cultural and political contexts with emphasis on multiple contested meanings of the body body parts and systems Case studies examples and discussion questions are both US based and international Advancing critical body studies the book explicitly discusses bodies in relation to race class gender sexuality ability age health geography and citizenship status The framing is sociological rather than biomedical attentive to cultural meanings institutional practices politics and social problems The authors use commonly understood anatomical frames to discuss social cultural political and ethical issues concerning embodiment

Assisted Conception: Research, Ethics and Law Jennifer Gunning, 2017-11-01 This title was first published in 2003 Assisted conception is an area where it often seems that all the ethical and legal issues have been covered and then technology advances and the discussions start all over again The book is an anthology of papers presented during a project looking at

therapeutic research in assisted conception TRAC It is divided into three areas addressing research ethics and law Each chapter begins with an overview of the issues with the aim being to present new perspectives rather than covering old ground The European Convention on Human rights and Biomedicine came into force on December 1 1999 The Convention allows therapeutic research and research on spare embryos but forbid fundamental research which may be essential to the safe development of new techniques This also means that people may become part of an experimental process without their consent The project brings together clinicians embryologists lawyers and ethicists to ascertain whether there might be a risk of infertility patients being exposed to insufficiently tested procedures and to see if there is a need for fundamental research in this area It also looks at the legislative safeguards that exist and whether a European standard for treatment should be set
