Reproductive Rights And Technology:

The Cambridge Handbook of Information Technology, Life Sciences and Human Rights Marcello Ienca, Oreste Pollicino, Laura Liguori, Elisa Stefanini, Roberto Andorno, 2022-05-26 Debates on the human rights implications of new and emerging technologies have been hampered by the lack of a comprehensive theoretical framework for the complex issues involved. This volume provides that framework, bringing a multidisciplinary and international perspective to the evolution of human rights in the digital and biotechnological era. It delves into the latest frontiers of technological innovation in the life sciences and information technology sectors such as neurotechnology, robotics, genetic engineering, and artificial intelligence. Leading experts from the technological, medical, and social sciences, as well as law, philosophy, and business, share their extensive knowledge about the transformation of the rights framework in response to technological innovation. In addition to providing a comprehensive interdisciplinary and international state-of-the-art descriptive analysis, the volume also offers policy recommendations to protect and promote human rights in the context of emerging socio-technological trends.

Contraceptive Technology Patty Cason, Carrie Cwiak, Deborah Kowal, Alison Edelman, 2023-09-26 Whether it is family planning, discussing reproductive desires, maintaining contraception while managing a specific condition, abortion, reproductive tract infection, or post-partum contraception, this trusted resource can be referenced in any situation when working with patients seeking guidance on reproduction, sexual health, and contraceptive options. Provided by publisher.

The Essentials of Contraceptive Technology Robert Anthony Hatcher, 1997 *Between Self-Determination and Social Technology* Kathrin Braun, 2014-03-15 The book critically examines how concepts such as self-determination, participation, ethics, or dialogue, developed not least by the feminist movement and directed against repression, heteronomy, and professional paternalism, have been integrated into new contexts and transformed into new social technologies. Crossing a variety of fields from birthing, genetic counselling, living wills, hospital ethics, to population policies and politics of biomedicine, it shows that medicine and medicine-related policies and practices form crucial arenas of these transformations. What we see emerging is procedural management as a new set of social techniques. With a preface by William Ray Arney Health Technology Assessment, Courts and the Right to Healthcare Daniel Wang, 2021-12-30 Both developing and developed countries face an increasing mismatch between what patients expect to receive from healthcare and what the public healthcare systems can afford to provide. Where there has been a growing recognition of the entitlement to receive healthcare, the frustrated expectations with regards to the level of provision have led to lawsuits challenging the denial of funding for health treatments by public health systems. This book analyses the impact of courts and litigation on the way health systems set priorities and make rationing decisions. In particular, it focuses on how the judicial protection of the right to healthcare can impact the institutionalization, functioning, and centrality of Health Technology Assessment (HTA) for decisions about the funding of treatment. Based on the case study of three jurisdictions: Brazil, Colombia, and England, it shows

that courts can be a key driver for the institutionalization of HTA. These case studies show the paradoxes of judicial control which can promote accountability and impair it, demand administrative competence and undermine bureaucratic capacities. The case studies offer a nuanced and evidence informed understanding of these paradoxes in the context of health care by showing how the judicial control of priority setting decisions in health care can be used to require and control an explicit scheme for health technology assessment but can also limit and circumvent it. It will be essential for those researching Medical Law and Healthcare Policy, Human Rights Law and Social Rights.

The Oxford Handbook of Law, Regulation and Technology Roger Brownsword, Eloise Scotford, Karen Yeung, 2017-07-25. The variety, pace and power of technological innovations that have emerged in the 21st Century have been breathtaking. These technological developments which include advances in networked information and communications, biotechnology, neurotechnology, nanotechnology, robotics and environmental engineering technology have raised a number of vital and complex questions. Although these technologies have the potential to generate positive transformation and help address grand societal challenges, the novelty associated with technological innovation has also been accompanied by anxieties about their risks and destabilizing effects. Is there a potential harm to human health or the environment? What are the ethical implications? Do these innovations erode or antagonize values such as human dignity, privacy, democracy or other norms underpinning existing bodies of law and regulation? These technological developments have therefore spawned a nascent but growing body of law and technology scholarship broadly concerned with exploring the legal, social and ethical dimensions of technological innovation. This handbook collates the many and varied strands of this scholarship, focusing broadly across a range of new and emerging technology and a vast array of social and policy sectors through which leading scholars in the field interrogate the interfaces between law, emerging technology and regulation. Structured in five parts, the handbook I establishes the collection of essays within existing scholarship concerned with law and technology as well as regulatory governance. II explores the relationship between technology development by focusing on core concepts and values which technological developments implicate. III studies the challenges for law in responding to the emergence of new technologies, examining how legal norms, doctrine and institutions have been shaped, challenged and destabilized by technology and even how technologies have been shaped by legal regimes. IV provides a critical exploration of the implications of technological innovation, examining the ways in which technological innovation has generated challenges for regulators in the governance of technological development and the implications of employing new technologies as an instrument of regulatory governance. V explores various interfaces between law, regulatory governance and new technologies across a range of key social domains.

Gender and Technology Caroline Sweetman, 1998. This collection of articles from *Gender and Development* considers technologies of many kinds, including those intended to save women's labour, to enable them to control their fertility and to learn and communicate using computer technology.

Routledge Handbook of Global Health Rights Clayton Ó Néill,Charles Foster,Jonathan Herring,John Tingle,2021-05-30 This book examines the idea of a fundamental entitlement to health and healthcare from a human rights perspective The volume is based on a particular conceptual reasoning that balances critical thinking and pragmatism in the context of a universal right to health Thus the primary focus of the book is the relationship or contrast between rights based discourse jurisprudential arguments and real life healthcare contexts The work sets out the constraints that are imposed on a universal right to health by practical realities such as economic hardship in countries lack of appropriate governance and lack of support for the implementation of this right through appropriate resource allocation It queries the degree to which the existence of this legally enshrined right and its application in instruments such as the International Covenant on Economic Social and Cultural Rights ICESCR and the Universal Declaration of Human Rights UDHR can be more than an ephemeral aspiration but can actually sustain promote and instil good practice It further asks if social reality and the inequalities that present themselves therein impede the implementation of laudable human rights particularly within marginalised communities and cadres of people It deliberates on what states and global bodies do or could do in practical terms to ensure that such rights are moved beyond the aspirational and become attainable and implementable Divided into three parts the first analyses the notion of a universal inalienable right to health care from jurisprudential anthropological legal and ethical perspectives The second part considers the translation of international human rights norms into specific jurisdictional healthcare contexts With a global perspective it includes countries with very different legal economic and social contexts Finally the third part summarises the lessons learnt and provides a pathway for future action The book will be an invaluable resource for students academics and policymakers
