Despite the growing interest in the role of psychological trauma in the genesis of psychiatric disorders few volumes have addressed these issues from a multidisciplinary and international perspective Given the complexity of resilience and posttraumatic disorder and given ongoing trauma and violence in many parts of the world it is crucial to apply such perspectives to review existing knowledge in the field and provide directions for future research This book has a broad scope A key focus is PTSD because of its clinical and health importance its obvious link with trauma and its interest for many clinicians and researchers However the book also examines resilience and a range of mental health consequences of trauma because it has become increasingly clear that not all individuals react to trauma in the same way It is important for mental health professionals to be aware of the broad range of potential responses to trauma as well as of relevant evidence based treatments The book includes chapters that address a wide range of topics on trauma related disorders including nosology and classification epidemiology neurobiology pharmacotherapy and psychotherapy Each chapter comprises a critical review of the existing literature aimed at being useful for the practitioner This is followed by selected commentaries from other authorities on the topic representing diverse geographical locations and points of view who refine some of the perspectives offered in the review provide alternative views or suggest important areas of future work **Posttraumatic Stress Disorder** Julian D.

The first edition of this book was written in response to the proliferation of research on psychological trauma along with the growing need for scientifically based evaluation of posttraumatic disturbance and its assessment. The second edition updates and expands on this endeavor. Also included in this second edition is information on additional forms of trauma, e.g., mass violence against noncombatants including the terrorist attacks of September 2001, life-threatening illness, and medical procedures, stalking, and sex trafficking, as well as added material on acute stress responses, complicated grief, reactions, adjustment disorders, posttraumatic depression, panic disorder, trauma-related psychosis, culture-bound stress responses, peritraumatic dissociation, and other dissociative responses and complex posttraumatic syndromes. In addition, this edition includes a brief analysis of assault syndromes, e.g., rape trauma syndrome and battered woman syndrome, as they relate to trauma assessment in forensic contexts. This book devotes considerable attention to different forms of trauma exposure and describes in detail the full range of potential posttraumatic responses. Psychotraumatology George S. Everly Jr., Jeffrey M. Lating, 2013-11-21 The nosological roots of post traumatic stress disorder PTSD may be traced back to the American Psychiatric Association's DSM I entry of gross stress reaction as published in 1952 Yet the origins of the current enthusiasm with regard to post traumatic stress can be traced back to 1980 which marked the emergence of the term post traumatic stress disorder in the DSM III This reflected the American Psychiatric Association's acknowledgment of post traumatic stress as a discrete phenomenologically unique and reliable psychopathological entity at a time in American history when such recognition had important social political and psychiatric implications Clearly prior to DSM I the lack of a generally accepted terminology did little to augment the disabling effects that psychological traumatization could engender Nor did the subsequent provision of an official diagnostic label alone render substantial ameliorative qualities Nevertheless the post Vietnam DSM III recognition of PTSD did herald a dramatic increase in research and clinical discovery The American Red Cross acknowledged the need to establish disaster mental health services the American Psychological Association urged its members to form disaster mental health networks and the Veterans Administration established a national study center for PTSD
