Yeh, 2011-03-01 As a consequence of the federal No Child Left Behind NCLB law there is tremendous pressure on school principals teachers school superintendents district staff state departments of education and governors to maximize the increase in student achievement that is obtained with every dollar of expenditure Currently teachers are forced to rely on extremely inefficient approaches that take enormous amounts of time both during the school day and throughout the K 12 learning years This is experienced in terms of the reduced time that is available to teach subjects other than math and reading as schools resort to double periods of math double periods of reading and enormous amounts of remedial instruction that directly reduce the time available for other subjects including science art and music In contrast this book suggests that student achievement may be increased in a way that is not only cost effective in dollar terms but efficient in the sense that it does not rely on unusual investments in the time required to obtain results The book draws upon a wealth of cost effectiveness data to dispel common notions about what works in addressing the achievement gap increased expenditure per pupil charter schools voucher programs increased educational accountability class size reduction comprehensive school reform increased teacher salaries more selective teacher recruitment the use of value added methods to measure and reward teacher performance the use of National Board teacher certification to identify high performing teachers and a host of other approaches

Self-regulation of Learning and Performance Dale H. Schunk, Barry J. Zimmerman, 2023-01-06 In recent years educators have become increasingly concerned with students attempts to manage their own learning and achievement efforts through activities that influence the instigation direction and persistence of those efforts In 1989 Zimmerman and Schunk edited the first book devoted to this topic They assembled key theorists offering a range of perspectives on how students self regulate their academic functioning One purpose of that volume was to provide theoretical direction to ongoing as well as nascent efforts to explore academic self regulatory processes Since that date there has been an exponential surge in research This second volume on academic self regulation offers the fruits of the first generation of research It also addresses a number of key issues that have arisen since then such as how self regulation differs from such related constructs as motivation and metacognition and whether students can be taught self regulatory skills The contributors reveal an interesting uplifting and at times disturbing picture of how students grapple with the day to day problems of achieving in circumstances with inherent limitations and obstacles This volume provides insight into the source of students capabilities to surmount adversities the

origins of their self initiated processes designed to improve learning motivation and achievement The text is organized on the basis of a conceptual framework that analyzes academic self regulation into four major dimensions That model is presented in the first chapter and key processes that influence each of these dimensions are discussed by prominent researchers in the chapters that follow Because each chapter is written to follow a common format this work provides a level of continuity and parsimony normally found only in authored textbooks *Powerful Teacher Education* Linda Darling-Hammond,2012-06-28 *Powerful Teacher Education* describes the strategies goals content and processes of seven highly successful and long standing teacher education programs Alverno College Bank Street College Trinity University University of California Berkeley University of Southern Maine University of Virginia and Wheelock College All these colleges and universities have succeeded in preparing teachers to teach diverse learners to achieve high levels of performance and understanding In discussing the common features of these programs Linda Darling Hammond shows what outstanding teacher education models do and how they do it and what their graduates accomplish as a result *Powerful Teacher Education* also examines the policies organizational features resources and relationships that have enabled these programs to succeed **Growing Up in a Changing Society** Ronnie Carr,Paul Light,Martin Woodhead,2014-02-04 The final reader in the Child Development in Social Context series shows how the study of child development is inevitably bound up in more ephemeral cultural ideas about the nature and needs of children and in the educational practices that rise from these ideas Some readings point to the dangers which can arise from the meeting of science and cultural values using for illustration studies of the role of psychological theory in reinforcing social attitudes to child care inside and outside the family Other readings look at children s initiation into that relatively recent cultural invention the school and the relationship with their learning at home There are studies of their social development in classroom and playground with particular emphasis on ethnic relationships **Bad Students, Not Bad Schools** Robert Weissberg,2019-01-22 Americans are increasingly alarmed over our nation s educational deficiencies Though anxieties about schooling are unending especially with public institutions these problems are more complex than institutional failure Expenditures for education have exploded and far exceed inflation and the rising costs of health care but academic achievement remains flat Many students are unable to graduate from high school let alone obtain a college degree And if they do make it to college they are often forced into remedial courses Why despite this fiscal extravagance are educational disappointments so widespread In *Bad Students Not Bad Schools* Robert Weissberg argues that the answer is something everybody knows to be true but is afraid to say in public America s educational woes too often reflect the demographic mix of students Schools today are filled with millions of youngsters too many of whom struggle with the English language or simply have mediocre intellectual ability Their lackluster performances are probably impervious to the current reform prescriptions regardless of the remedy s ideological derivation Making matters worse retention of students in school is embraced as a philosophy even if it impedes the learning of other students Weissberg argues that most

of America's educational woes would vanish if indifferent troublesome students were permitted to leave when they had absorbed as much as they could learn they would quickly be replaced by learning hungry students including many new immigrants from other countries American education survives since we import highly intelligent technically skillful foreigners just as we import oil but this may not last forever When educational establishments get serious about world class mathematics and science and permit serious students to learn problems will dissolve Rewarding the smartest not spending fortunes in a futile quest to uplift the bottom should become official policy This book is a bracing reminder of the risks of political manipulation of education and argues that the measure of policy should be academic achievement

Perceived Control, Motivation, & Coping Ellen A. Skinner, 1995-02-08 At every point in the life span individual differences in a sense of control are strong predictors of motivation coping success and failure in a wide range of life domains What are the origins of these individual differences how do they develop and what are the mechanisms by which they exert such influence on psychological functioning This book draws on theories and research covering key control constructs including self efficacy learned helplessness locus of control and attribution theory Ellen A Skinner discusses such issues as the origins of control in social interactions environmental features that promote or undermine control developmental change in the mechanisms by which experiences of control have their effects on action and the implications for intervening into the competence system including interventions for people in uncontrollable circumstances Written at a level appropriate for upper division undergraduates the book can serve as a supplement to the social and personality development course as well as a core text for motivation educational psychology or clinical courses at the graduate level This book won't be the first one on the topic but it will be the first one that professionals and graduate students turn to whenever they want a definitive opinion on complex questions of control or an idea for cutting edge research on the topic of motivation coping and control
