Volume 3 of Research in Collegiate Mathematics Education RCME presents state of the art research on understanding teaching and learning mathematics at the post secondary level This volume contains information on methodology and research concentrating on these areas of student learning Problem Solving Understanding Concepts and Understanding Proofs

Research in Collegiate Mathematics Education IV Ed Dubinsky, Alan H. Schoenfeld, James J. Kaput, This collection of essays focuses on student learning of mathematics primarily calculus but also looks at student understanding of abstract algebra and number theory Two of the chapters explore through overviews differing learning and teaching techniques of France and the United States especially as they pertain to calculus reform Other articles explore why students have difficulty applying their knowledge to solving non routine problems the lasting effects of the integrated use of graphing technologies in precalculus and visual confusion in permutation representations Annotation copyrighted by Book News Inc Portland OR

Research in Collegiate Mathematics Education Ed Dubinsky, Alan H. Schoenfeld, James J. Kaput, 1994 The field of research in collegiate mathematics education has grown rapidly over the past twenty five years Many people are convinced that improvement in mathematics education can only come with a greater understanding of what is involved when a student tries to learn mathematics and how pedagogy can be more directly related to the learning process Today there is a substantial body of work and a growing group of researchers addressing both basic and applied issues of mathematics education at the collegiate level This volume is testimony to the growth of the field The intention is to publish volumes on this topic annually doing more or less as the level of growth dictates The introductory articles survey papers and current research that appear in this first issue convey some aspects of the state of the art The book is aimed at researchers in collegiate mathematics education and teachers of college level mathematics courses who may find ideas and results that are useful to them in their practice of teaching as well as the wider community of scholars interested in the intellectual issues raised by the problem of learning mathematics

Research in Collegiate Mathematics Education VII Fernando Hitt, Derek Allan Holton, Patrick W. Thompson, 2010-03-05 The present volume of Research in Collegiate Mathematics Education like previous volumes in this series reflects the importance of research in mathematics education at the collegiate level The editors in this series encourage communication between mathematicians and mathematics educators and as pointed out by the International Commission of Mathematics Instruction ICMI much more work is needed in concert with these two groups Indeed editors of RCME are aware of this need and the articles published in this series are in line with that goal Nine papers constitute this volume The first two examine problems students experience

when converting a representation from one particular system of representations to another The next three papers investigate students learning about proofs In the next two papers the focus is instructor knowledge for teaching calculus The final two papers in the volume address the nature of conception in mathematics Whether they are specialists in education or mathematicians interested in finding out about the field readers will obtain new insights about teaching and learning and will take away ideas that they can use

Research in Collegiate Mathematics Education II James J. Kaput, Ed Dubinsky, Alan H. Schoenfeld, 1996 The field of research in collegiate mathematics education has grown rapidly over the past 25 years Many people are convinced that improvement in mathematics education can only come with a greater understanding of what is involved when a student tries to learn mathematics and how pedagogy can be more directly related to the learning process Today there is a substantial body of work and a growing group of researchers addressing both basic and applied issues of mathematics education at the collegiate level This second volume in Research in Collegiate Mathematics Education begins with a paper that attends to methodology and closes with a list of questions The lead off paper describes a distinctive approach to research on key concepts in the undergraduate mathematics curriculum This approach is distinguished from others in several ways especially its integration of research and instruction The papers in this volume exhibit a large diversity in methods and purposes ranging from historical studies to theoretical examinations of the role of gender in mathematics education to practical evaluations of particular practices and circumstances As in RCME I this volume poses a list of questions to the reader related to undergraduate mathematics education The eighteen questions were raised at the first Oberwolfach Conference in Undergraduate Mathematics Education which was held in the Fall of 1995 and are related to both research and curriculum This series is published in cooperation with the Mathematical Association of America

Research in Collegiate Mathematics Education , 1994 Research in Collegiate Mathematics Education VI Fernando Hitt, Guershon Harel, Annie Selden, 2006 The sixth volume of Research in Collegiate Mathematics Education presents state of the art research on understanding teaching and learning mathematics at the postsecondary level The articles advance our understanding of collegiate mathematics education while being readable by a wide audience of mathematicians interested in issues affecting their own students This is a collection of useful and informative research regarding the ways our students think about and learn mathematics The volume opens with studies on students experiences with calculus reform and on the effects of concept based calculus instruction The next study uses technology and the van Hiele framework to help students construct concept images of sequential convergence The volume continues with studies on developing and assessing specific competencies in real analysis on introductory complex analysis and on using geometry in teaching and learning linear algebra It closes with a study on the processes used in proof construction and another on the transition to graduate studies in mathematics Whether they are specialists in education or mathematicians interested in finding out about the field readers will obtain new insights about teaching and learning and will take away ideas that they can use Information for our
