Research On Computerbased Instruction:

   Assessing the Impact of Computer-Based Instruction Margaret D Roblyer,William Castine,F J King,1988-11-16 Can computer applications help improve student performance For what skills grade levels content areas and type of students are computer applications most effective Can computer applications improve student attitude toward school and decrease drop out rates Discover what the research reveals in this provocative new book about these and other crucial questions concerning the impact of computer based instruction Assessing the Impact of Computer Based Instruction provides the most comprehensive and up to date summary available on the effects of computer applications on both student achievement and attitudes Within its pages are also the most extensive bibliography ever prepared on past reviews of research current reports and articles and dissertations in the area of computer uses in education This groundbreaking new book provides educational decisionmakers with the facts they need in order to justify the expense and effort of maintaining and expanding the instructional role of computers in schools It is also useful as a resource text in the pre service training of computer educators and for graduate students doing research in instructional computing   Computer-Based Education in the Social Studies Lee Ehman,Allen D. Glenn,1987 Computers have not revolutionized social studies curricula because so few teachers use them But research does indicate that computers are flexible instructional tools that can assist in the development of attitudes intellectual motivation and inquiry skills Social studies educators need to consider expanded computer use in their classrooms because computers assist in the preparation of students for effective participation in society Teachers must understand how technology affects instruction learning and classroom environments along with the types of effective instructional strategies that can be used to achieve specific goals Educators should acquire the knowledge and experience needed to use computers by reviewing research relating to computer use in teaching and to instructional strategies Information on research concerning the impact of computers on students how computers change the way teachers work computers effect on the training process and computers influence on the social studies curriculum is included Necessary teacher competencies and appropriate instructional uses are explored through an analysis of teacher utility programs databases data analysis programs and simulations A 76 item bibliography concludes the document JHP   *Computer-based Instruction* Andrew S. Gibbons,Peter G. Fairweather,1998   **Impact of Computer-based Instruction on Academic Achievement** Kevin Chirco,2018 The purpose of this study was to determine whether computer based instruction impacted student academic achievement and attitudes towards using technology in the classroom This action research study used a quantitative research methods approach by analyzing pre and post tests and student surveys Twenty eight third grade students participated in the study by completing a pre and post test an Attitude Survey and lessons on fractions over a three week period The participants were randomly grouped into two instructional groups of fourteen computer based and teacher led The researcher analyzed both pre and post tests to determine how much growth students made after receiving

instruction in their group The researcher also analyzed surveys taken from the computer based instruction group at the start and conclusion of the study to determine changes in attitudes for students learning through computer based instruction Findings from the study indicate that the use of computer based instruction positively impacts student academic achievement The results also found that the extended use of computer based learning in the classroom improves student attitudes towards learning and technology However data also showed computer based instruction is not as effective on academic achievement as teacher led instruction Recommendations from the study include increasing the access and opportunities to use computer based learning in the classroom Additionally using computer based instruction as a supplementary form to teacher led instruction can potentially provide students will a stronger understanding of any topic   Computer-Based Instruction in Military Environments Robert J. Seidel,P.D. Weddle,2012-12-06 This collection of papers is the result of a symposium sponsored by NATO s Defense Research Group Panel VIII in the Spring of 1985 The symposium came into being when it became obvious to the NATO countries that research development and utilization of advanced technologies for training was the best means of increasing both training effectiveness and efficiency This symposium was the second in a series of three devoted to training The series was structured to cover all aspects of training The first series addressed the value of training the second one dealt with the application of training technologies and the third and last of the series focused on academic issues concerned with the effect of prior learning on subsequent learning The fact that a major American publisher has determined that computer based instruction is the technology of greatest interest to the NATO community is not surprising Advances in microprocessor technology have revolutionized both how and where we train During this symposium there were a limited number of carefully chosen exhibits to demonstrate the various applications of computer based training techniques In the following papers you will find both a practical and scientific basis for the way current and future training and training systems should be designed applied and utilized We know that training must be done faster and more effectively
