Abstract

This study describes the use of gas chromatography/mass spectrometry with selected ion monitoring to screen 18 anabolic steroids banned by the International Olympic Committee. These anabolic steroids are analyzed in two fractions depending on their excretion pattern: nonconjugated (free) or conjugated fraction. The wet procedure of extracting steroids from urine consists of an initial isolation of lipophilic compounds on a column packed with Amberlite XAD-2 resin, followed by enzymatic hydrolysis with β -glucuronidase from *Escherichia coli*. After extraction, the hydrolyzed steroids are derivatized to the corresponding trimethylsilyl ethers. The derivatized steroids are analyzed by gas chromatography/mass spectrometry with selected ion monitoring of their characteristic ions. It takes 12 and 26 min to run GC/MS and edit the raw data for nonconjugated and conjugated fractions respectively.

Introduction

In 1974, steroids were added to the list of doping agents banned by the International Olympic Committee on the grounds that drug abuse is against the Olympic spirit based on fair play, and also it is known that steroid abuse will harm the well-being of athletes. Nevertheless, it is suspected that the use of steroids has been steadily increasing among the players, who believe that the use of steroids improves their physical strength remarkably over a short period of time and who are willing to barter their health for fame and monetary gain. Precise and rapid determination of anabolic steroids and their metabolites continues to be of interest.

Some steroids can be analyzed with high-performance liquid chromatography (HPLC) (1-5), and it has been possible to detect 17 α -methyl, 17 α -ethyl, and 19-nortestosterone steroids by radioimmunoassay (RIA) despite the method's low specificity (6-9). However, both of these methods cannot provide the data necessary to confirm a presumptive positive sample. Therefore, gas chromatography/mass spectrometry (GC/MS) with high sensitivity and specificity has been regarded as the most reliable technique so far. In many cases, GC/MS has been used to

analyze the steroids either qualitatively or quantitatively (10-23).

Anabolic steroids are extensively metabolized: hydroxylation, reduction, oxidation, and conjugation are common metabolic pathways of anabolic steroids in humans. As far as conjugation patterns are concerned, steroids can be divided into two groups, nonconjugated (free) steroid and conjugated steroid. Dosáček reported that methandienone, oxandrolone, fluoxymesterone, stanozolol, dehydrochloromethyltestosterone, and formyltestosterone can be detected somewhat easily in the nonconjugated fraction. These anabolic steroids have a 17 β -hydroxy-17 α -methyl group in their structure (Figure 1). The other anabolic steroids whose structures are shown in Figure 2 are excreted mainly as glucuronides.

Materials

Reagents. Amberlite XAD-2 resin, 150-200 μ m, from Serva was used. Methanol (500 mL) was distilled at 64°C; the first 50 mL was discarded and the next 300 mL was collected. The phosphate buffer, pH 7.0, was 250 mL of 0.2M K_2HPO_4 mixed with 50 mL of 0.2M KH_2PO_4 . Diethylether was distilled with calcium hydride and stored in a refrigerator at ca. 1°C. β -Glucuronidase from *Escherichia coli* was from Boehringer. *N*-methyl-*N*-trimethylsilyl trifluoroacetamide (MSTFA), trimethylchlorosilane (TMSi), and trimethylchlorosilane (TMSCl) were from Sigma, and *N*-methyl-*N*-trimethylsilyl heptafluorobutyramide (MSHFB) and *N*-methyl-bisheptafluorobutyramide were from Macherey-Nagel.

Instrumentation. Analyses were performed with a Hewlett-Packard Model 5890A gas chromatograph and Model 5970B mass selective detector.

GC/MS operating conditions for nonconjugated fraction. A cross-linked 5% phenylmethylsilicone capillary column (length 17 m, i.d. 0.2 mm, film thickness 0.33 μ m) was connected into the ion source. Samples were injected in the splitless mode. Temperatures of injector and transfer line were set at 300°C. Oven temperature was initially 180°C, ramped by 25°C/min to 300°C, and held for 3 min. The carrier gas was helium at a flow rate of 0.7 mL/min (at 180°C).

GC/MS operating conditions for conjugated fraction. The GC was equipped with a 17-m HP-1 fused-silica capillary column, 0.2 mm i.d., 0.11- μ m film thickness. The oven temperature was

Testicular Tangrams Focko Rommerts,K.J. Teerds,2002-04-03

During the past two decades research on the testis has created a vast number of publications New techniques such as cell and gene cloning germ cell manipulation and transplantation as well as gene expression have surpassed the classical approaches that involved studies on receptor activation and endocrine paracrine and autocrine regulatory mechanisms Due to the expansion of this field of research it has become increasingly difficult to integrate the large number of observations and relate them to the physiology and pathophysiology of the testis More emphasis must therefore be put on the integration

of isolated findings and the construction of the total picture In order to stimulate this specific mental activity we have named this book Testicular Tan gram We hope that the chapters in this book will be used as pieces of the testicular puzzle and that the reader enjoys composing new shapes The chapters of this book are representative of the plenary lectures presented at the 11th European Workshop on Molecular and Cellular Endocrinology of the Testis held in Doorwerth The Netherlands from April 6 to 10 2002 Publication of this book has been made possible by the generous support of the Ernst Schering Research Foundation We would also like to thank the distinguished scientists who have provided us with their excellent manuscripts well before the start of the Workshop We acknowledge the help of Dr U F Habenicht Dr M

The Role of Natural Products in Drug Discovery J. Mulzer, R. Bohlmann, 2013-04-17 Natural Products have been important sources of useful drugs from prehistoric times to the present This book gives an overview about this field and provides important recent contributions to the discovery of new drugs generated by research on natural products Total synthesis of natural products with interesting biological

activities is paving the way for the preparation of new and improved analogs. The methods of combinatorial chemistry permit the selection of the best drug from a large number of candidates. Beyond synthesis and evaluation of organic molecules a number of new bioorganic methods are coming to the fore and will be discussed in this issue of the Ernst Schering Research Foundation workshop proceedings Opportunities and Challenges of the Therapies Targeting CNS Regeneration H.D. Perez, B. Mitrovic, A. Baron Van Evercooren, 2007-01-19. The therapeutic options for the treatment of Multiple Sclerosis MS and other neurodegenerative and traumatic diseases such as spinal cord injury Alzheimer's Parkinson's disease etc have experienced enormous progress over recent years. Despite these encouraging developments available therapies are only partially effective and the ultimate goal is still far from being attained. Improved understanding of the cellular and molecular mechanisms of the pathogenesis of neurodegeneration and demyelination has led to a variety of new therapeutic targets and approaches. In addition to modulation of the inflammatory process MS and classical neuroprotection stroke AD therapeutic approaches focusing on active remyelination and neuronal regeneration have become increasingly important. Based on current concepts this book summarizes new therapeutic approaches Neuroinflammation in Stroke Ulrich Dirnagl, Bernd Elger, 2004-01-14. The successful treatment of acute stroke remains one of the major challenges in clinical medicine. Over the last decades the understanding of stroke pathophysiology has greatly improved while the therapeutic options in stroke therapy remain very limited. Today hyperacute mechanisms of damage such as excitotoxicity can be discriminated from delayed ones such as inflammation and apoptosis. Targeting of inflammation has already been successfully applied in various stroke models but translation into a clinically efficacious strategy has not been achieved so far. In this book leading experts in basic cerebrovascular research as well as stroke treatment review the current evidence for and against an important role for inflammation in stroke and explore the potential of treating or modulating inflammation in stroke therapy Chemokine Roles in Immunoregulation and Disease Philip M. Murphy, Richard Horuk, 2003-10-23. The Ernst Schering Workshop on Chemokine Roles in Immunoregulation and Disease with contributions by leading experts in the field succinctly summarizes cutting edge research in immunology protein chemistry and disease. This book gives an up to date overview of important developments in immunology with a concise state of the art review of chemokines. It is a time saving reference for both researchers and students providing fast and easy access to the latest information in this important area of research.

Biocombinatorial Approaches for Drug Finding W. Wohlleben, T. Spellig, B. Müller-Tiemann, 2007-01-19. Genome and proteome based research is generating a significant increase in the number of available drug targets. Correspondingly there is an increasing need for novel diverse compounds particularly based on natural compounds as screening resource. The purpose of the Ernst Schering Research Foundation Workshop 51 was to provide a forum for an open exchange on perspectives and limitations of biocombinatorial synthesis and the significance of this technology for future drug discovery in light of this challenge. Experts from academia and industry provided contributions covering the significance of natural

compounds for state of the art drug discovery the underlying basic principle for the biosynthesis of highly complex compounds and the scope and limitations of combinatorial biosynthesis regarding formation identification optimisation isolation and manufacturing of novel biologically active entities
