NATIONAL RESEARCH COUNCIL. COMMITTEE ON RESEARCH PRIORITIES IN TROPICAL BIOLOGY. (Washington, 1980 **Study Week on a Modern Approach to the Protection of the Environment** G. B. Marini-Bettòlo, 2017-01-31 These Proceedings consider all aspects of the environmental problems facing the world today scientific social economic philosophical and historical Many of the discussions which followed paper presentations are included in the text Along with scientific discussions of solutions to particular problems the book argues for a new approach to thought and action in the use of natural resources If a constructive global strategy towards the protection of the environment is to be socially compatible and economically sound then it must be developed through an interdisciplinary approach which will avoid the impractical solutions which might be suggested by theoretical or unilateral considerations Ecological economic social and cultural research must be accompanied by the development of a new mentality of respect for the environment which will inculcate a reasonable and moderate use of natural resources **Program Report** , 1978 Each issue covers a different subject Program Report - National Science Foundation National Science Foundation (U.S.), 1978 **Human Exploitation and Biodiversity Conservation** David L. Hawksworth, Alan T. Bull, 2008-01-03 This book presents a wide range of contributions addressing diverse aspects of biodiversity exploitation and conservation These collectively provide a snapshot of ongoing action and state of the art research rather than a series of necessarily more superficial overviews Examples presented here derive from studies in 17 countries including Africa Asia Europe and North and South America These reports will stimulate future work toward attaining a sustainable balance between the conservation and exploitation of biodiversity *Biological Invasions Belowground: Earthworms as Invasive Species* Paul F. Hendrix, 2008-09-01 The most conspicuous biological invasions in terrestrial ecosystems have been by exotic plants insects and vertebrates Less conspicuous but possibly of equal importance are invasions by soil invertebrates which are occurring literally beneath our feet Familiar examples include the South American fire ant *Solenopsis invicta* which has invaded North America and Australia and the New Zealand flatworm *Arthurdendyus triangulatus* which has become wide spread in the United Kingdom both have caused considerable ecological and economic damage There is now evidence that exotic earthworm invasions are increasing world wide and may be having significant impacts on soil processes and plant communities in some regions Much remains to be learned about these cryptic biological invasions The papers in this book are based on efforts by an international group of soil ecologists to assess the biological and ecological mechanisms of earthworm invasions their geographic extent and impacts on terrestrial ecosystems and possible means by which earthworm invasions might be mitigated Research Strategies for the U.S. Global Change Research Program National Research Council, Division on Engineering and Physical Sciences, Commission on Physical
