Intelligent agent and distributed AI. DAI approaches attach specific conditions to cooperative exchanges between intelligent systems that go far beyond simple functional interoperability. Ideally, systems that pursue local or global goals coordinate their actions, share knowledge and resolve conflicts during their interactions. Within groups of similar or dissimilar agents, can be viewed as cooperative coarse grained systems. The infrastructure of telecommunications is a world in transition. There are a number of trends that contribute to this convergence of traditional telephony and data network worlds: blurring of boundaries between public and private networks, complementary evolution of wireline, wireless and cable network infrastructures, the emergence of integrated broadband multimedia networks and of course the information superhighway. Up to now, despite the effort that has gone into this area, the field of intelligent agents research has not yet led to many fielded systems. Telecommunications applications pose strong requirements to agents such as reliability, real time performance, openness, security, management and other integrated management and mobility. In order to fulfil their promise, intelligent agents need to be fully dependable and typically require an integrated set of capabilities. This is the challenge that exists for intelligent agents technology in this application domain.

Understanding Changing Telecommunications Anders Olsson, 2005-08-05 The field of telecommunications is becoming ever more complex In order to manage the new Telecom industry it is necessary not only to understand its 3 main components namely the end users the technology and networks and the business aspects but also their vital inter relationships Complexity leads to uncertainty and one effect of uncertainty is for people to underestimate the complexity of the business and the technology This book takes a holistic approach to the subject and can be used as a tool for decreasing this uncertainty During 2000 many operators paid extremely high sums of money for 3G licenses in a number of European countries supposing a potential corresponding and balancing revenue from mobile services in the new frequency band Obviously today the licenses are questionable Consequently suppliers and operators were forced to reduce their international work force What are the underlying reasons Since the true rate and level of development was hardly foreseen by anyone the picture is complex including factors such as psychology and belief in a new economy It is immediately clear that the end user impact has been severely under estimated It is also clear that the expected development has and is happening with more

speed than expected and continues to be complemented with solutions such as wireless LANs This book treats the paradigm shift from a number of angles user needs and demands deregulation of telecom and the convergence between telecommunications data communications and the media industry the service plan service implementation QoS and Security Understanding Changing Telecommunications focuses on the overall principles and context of the new telecommunications world rather than on high level technical descriptions in order to aid the understanding and development of the next generation of telecom networks e g multimedia over IP and 3G Discusses the development of telecommunications up until 2005 Provides a holistic view of the world of telecommunications Covers three main areas End users Technologies and Networks and Telecom Business and their vital inter relationships Offers support and advice for those needing to implement business plans Essential reading for staff with operators and providers involved in the telecom networks especially management planning and design development integration and training as well as Business analysts and investors keen to understand the current state of the Telecom industry

Intelligence in Communication Systems Finn Arve Aagesen, Chutiporn Anutariya, Vilas Wuwongse, 2004-11-03 The 2004 IFIP International Conference on Intelligence in Communication Systems INTELLCOMM2004 held in Bangkok Thailand 23-26 November 2004 was the successor and an expansion of SMARTNET a series of annual conferences on intelligence in networks held during 1995-2003 under the auspices of IFIP TC6 s Working Group 6.7 The Internet and Web provide more connection facilities hence the man man man

machine and machine machine interactions will increase and communication will have an important role in modern systems. In order to obtain effective and efficient communication, artistic, social and technical issues have to be tackled in a holistic and integrated manner. However, communication techniques, concepts and solutions which have been developed so far treat these issues separately so that there arises a need for communication researchers and practitioners in different fields: engineering, science and arts to meet, share their experience and explore all possibilities of developing integrated and advanced solutions which incorporate ideas from such disciplines as communication arts, art design, linguistics, Web technologies, computer system architecture and protocols, computer science and artificial intelligence. INTELLCOMM 2004 was jointly sponsored by IFIP WG 6.7 Smart Networks and WG 6.4 Internet Applications Engineering and aimed to provide an international forum which brings academia, researchers, practitioners and service providers together. The discussion areas covered the latest research topics and advanced technological solutions in the area of intelligence in communication systems ranging from architectures for adaptable networks, services and Semantic Web.

Web service technologies to intelligent service application interface and intelligent human interaction. INTELLCOMM 2004 received 112 paper submissions from 28 countries. From these 24 were accepted and are included in this proceedings. There were also 3 papers accepted for poster presentation published separately. Breakthrough Perspectives in Network and Data Communications: Security, Design and Applications Bose, Indranil, 2008-12-31. Addresses key issues and offers expert viewpoints into the field of network and data communications. Presents research articles that investigate the most significant issues in network and data communications.
