Biogeochemistry of Ancient and Modern Environments P. A. Trudinger,M. R. Walter,B. J. Ralph,2013-06-29 This volume contains a selection of papers presented to the Fourth International Symposium on Environmental Biogeochemistry ISEB and a conference on Biogeochemistry in Relation to Mining Industry and Environmental Pollution Leaching Conference held in Canberra Australia on August 26 31 and September 3 4 1979 respectively The ISEB were established to provide a forum for uninhibited exchange of information and ideas among the biological chemical atmospheric and geological scientists working in the common area of biogeochemistry encompassing soil and other earth sciences as well as the hydrosphere and atmosphere By linking the fourth ISEB with the Leaching Conference the scope of discussions was extended to encompass the application of biogeochemical processes to the mining industry This wide ranging philosophy is reflected in the breadth and diversity of the subjects covered in this book The published papers are expanded versions of those presented at the meetings They have all been scrutinized by at least one referee in addition to the editors About 20% of the contributions to the meetings are not included either because authors did not wish to publish or because the papers were not accepted by the editors

McCulloh,2012-12-06 The collection of papers in this volume is a direct result of the Society of Economic Paleontologists and Mineralogists Research Symposium on Thermal History of Sedimentary Basins Methods and Case Histories held as part of the American Association of Petroleum Geologists Annual Convention in New Orleans in March 1985 The original goal of the symposium was to provide a forum where specialists from a variety of disciplines could present their views of methods that can be used to study the thermal history of a sedimentary basin or an important portion of a basin An explicit part of that goal was to illustrate each method by presentation of a case history application The original goal is addressed by the chapters in this volume each of which emphasizes a somewhat different approach and gives field data in one way or another to illustrate the practical usefulness of the method The significance of our relative ignorance of the thermal conductivities of sedimentary rocks especially shales in efforts to understand or model sedimentary basin thermal histories and maturation levels is a major thrust of the chapter by Blackwell and Steele Creaney focuses on variations in kerogen composition in source rocks of different depositional environments and the degree to which these chemically distinct kerogens respond differently to progressive burial heating
