Seeds J. Bewley, 2012-12-06 Since the publication of our monograph on seed physiology and biochemistry *The Physiology and Biochemistry of Seeds in Relation to Germination* Springer Verlag 1978 1982 it has been suggested to us that a text covering the same subject area would be appropriate This book is our response Unlike the previous volumes however this text is not intended to be either a critical or a comprehensive account Instead it is a more generalized consideration of the essential aspects of seed physiology and biochemistry as we see them It also includes a substantial amount of new and different material In a work of this sort it is inevitable that some simplifications must be made but we hope nevertheless that we have presented the most reasonable conspectus of areas of controversy and uncertainty In this respect literature citations have been kept to a minimum and do not interrupt the text they are placed at the end of each chapter and are intended to be used as a source for further references We hope that this book will be of value to students and teachers in universities colleges and other institutes of higher learning whose courses include plant biology Although it is particularly appropriate for studies of seed biology it should also find broader applications in general plant physiology agriculture and horticulture

Seeds J. Bewley, 1995-12-31 **Seeds** Bewley J. Derek, 1985 Cellular and Molecular Biology of Plant Seed Development Brian A. Larkins, Indra K. Vasil, 1997-09-30 The beginnings of human civilization can be traced back to the time nearly 12 000 years ago when the early humans gradually changed from a life of hunting and gathering food to producing food This beginning of primitive agriculture ensured a dependable supply of food and fostered the living together of people in groups and the development of society During this time plant seeds were recognized as a valuable source of food and nutrition and began to be used for growing plants for food Ever since plant seeds have played an important role in the development of the human civilization Even today seeds of a few crop species such as the cereals and legumes are the primary source of most human food and the predominant commodity in international agriculture Owing to their great importance as food for humans and in international trade seeds have been a favorite object of study by

developmental biologists and physiologists nutritionists and chemists A wealth of useful information is available on the biology of seeds
