Zhang,2013-11-11 Biometrics based authentication and identification are emerging as the most reliable method to authenticate and identify individuals Biometrics requires that the person to be identified be physically present at the point of identification and relies on something which you are or you do to provide better security increased efficiency and improved accuracy Automated biometrics deals with physiological or behavioral characteristics such as fingerprints signature

palmprint iris hand voice and face that can be used to authenticate a person's identity or establish an identity from a database. With rapid progress in electronic and Internet commerce there is also a growing need to authenticate the identity of a person for secure transaction processing. Designing an automated biometrics system to handle large population identification accuracy and reliability of authentication are challenging tasks. Currently there are over ten different biometrics systems that are either widely used or under development. Some automated biometrics such as fingerprint identification and speaker verification have received considerable attention over the past 25 years and some issues like face recognition and iris based authentication have been studied extensively resulting in successful development of biometrics systems in commercial applications. However very few books are exclusively devoted to such issues of automated biometrics. Automated Biometrics Technologies and Systems systematically introduces the technologies and systems and explores how to design the corresponding systems with in depth discussion. The issues addressed in this book are highly relevant to many fundamental concerns of both researchers and practitioners of automated biometrics in computer and system security.

Essential Aspects of Immunometabolism in Health and Disease Niels Olsen Saraiva Camara, Jose C Alves-Filho, Pedro Manoel Mendes de Moraes-Vieira, Vinicius Andrade-Oliveira, 2021-10-21. Immunometabolism has emerged as an intersectional crossroad between metabolism and immune response. Over the past decade it has become clear that most if not all immune cell functions are not separated from cellular metabolism. Although seminal works have addressed the metabolic fate of immune cells during differentiation and function the physiological status of a given tissue is also dependent on the cell metabolism. The dialogue between immune cells and their microenvironment can also modulate cellular metabolism which can trigger the onset and progression of a multitude of inflammation mediated diseases. Thus uncovering the specific characteristics of the metabolism in different immune cells types and in different conditions can shed light into the molecular mechanisms of disease and help develop new drugs and therapeutic strategies to treat immune diseases. The edited volume Essential aspects of Immunometabolism will give the readers a broad view on how metabolic pathways can influence many types of immune cells during activation differentiation and function in health and disease. Of note the structure of the book was created thinking not only on the experienced immunologist but also on

undergraduate and graduate students physicians and all members of the scientific community interested in this exciting field of research
