Lymphocyte Circulation Experimental And Clinical Aspects:

Lymphocyte Circulation Maria S. De Sousa, *Lymphocyte Circulation* Maria De Sousa, 1981 **The Reticuloendothelial System** S.M. Phillips, M.R. Escobar, 2013-04-17 This comprehensive treatise on the reticuloendothelial system is a project jointly shared by individual members of the Reticuloendothelial RE Society and bio medical scientists in general who are interested in the intricate system of cells and molecular moieties derived from those cells which constitute the RES. It may now be more fashionable in some quarters to consider these cells as part of what is called the mononuclear phagocytic system or the lymphoreticular system. Nevertheless because of historical developments and current interest in the subject by investigators from many diverse areas it seems advantageous to present in one comprehensive treatise current information and knowledge concerning basic aspects of the RES such as morphology, biochemistry, phylogeny and ontogeny, physiology and pharmacology as well as clinical areas including immunopathology, cancer, infectious diseases, allergy and hypersensitivity. It is anticipated that by presenting information concerning these apparently heterogeneous topics under the unifying umbrella of the RES, attention will be focused on the similarities as well as interactions among the cell types constituting the RES from the viewpoint of various disciplines. The treatise editors and their editorial board, consisting predominantly of the editors of individual volumes and enormous tasks, are extremely grateful for the enthusiastic cooperation undertaken by members of the biomedical community in general and especially Japanese Reticuloendothelial Society members of the American as well as European Reticuloendothelial Societies.

Photoimmunology John Parrish, 2013-11-11 In this book we attempt to summarize the present state of knowledge in the field of photoimmunology and to provide the background necessary to put this knowledge into perspective. This objective requires descriptive overviews in photobiology, immunology and dermatology. Our hope is to facilitate interdisciplinary communication and to stimulate interest in photoimmunology. Section I Principles of Photoimmunology describes 1 basic interactions between UV and visible radiation and biologic matter, 2 the optical properties of human skin and 3 normal and abnormal responses to UV radiation. Basic principles of selected aspects of immunology and photobiology are explained. Section II Experimental Photoimmunology describes molecular, cellular, animal and human studies in photoimmunology. Section III Clinical Photoimmunology presents evidence of the involvement of photoimmunologic mechanisms in diseases of the skin and blood and examines the possible involvement of immunologic mechanisms in therapeutic photomedicine. The fundamental principles outlined in this book should prove useful for decades to come. However, our expectation is that the experimental data will be outdated in a short period of time. The potential of photoimmunology is great enough and the serious study of photoimmunology is recent enough that this should be the case. This book is dedicated to the goal of continuing rapid growth in the field of photoimmunology.

Radiolabeled Cellular Blood Elements M. L. Thakur, 2013-03-13 Preparing manuscripts with figures and tables for camera reproduction was a formidable task. Care has been taken for consistency and typographic accuracy.
