Machining Technology Robert King,2013-03-08 The United States now spends approximately 115 billion annually to perform its metal removal tasks using conventional machining technology Of this total amount about 14 billion is invested in the aerospace and associated industries It becomes clear that metal removal technology is a very important candidate for rigorous investigation looking toward improvement of productivity within the manufacturing system To aid in this endeavor work has begun to establish a new scientific and technical base that will provide principles upon which manufacturing decisions may be based One of the metal removal areas that has the potential for great economic advantages is high speed machining and related technology This text is concerned with discussions of ways in which high speed machining systems can solve immediate problems of profiling pocketing slotting sculpturing facing turning drilling and thin walled sectioning Benefits to many existing programs are provided by aiding in solving a current management production problem that of efficiently removing large volumes of metal by chip removal The injection of new high rate metal removal techniques into conventional production procedures which have remained basically unchanged for a century presents a formidable systems

problem both technically and managerially. The proper solution requires a sophisticated difficult process whereby management worker relationships are reassessed, age-old machine designs reevaluated and a new vista of product process planning and design admitted. *Rapid One-of-a-kind Product Development* Shane (Shengquan) Xie, Yiliu Tu, 2011-02-18

Rapid One of a kind Product Development discusses research in the development of new enabling technologies for small and medium companies. Scientific advancements presented include a novel product data modelling scheme to model product design manufacturability and knowledge under a common data object, customised product development in a distributed environment and new adaptive scheduling methods for the optimal production of a wide variety of customised products taking into consideration all of the possible changes from customers and the uncertainties in manufacturing. The book also includes research towards a computer-aided customer interface which allows customer requirements and changes to be processed and integrated with technical designs in real time, adaptive and concurrent CAD methods and algorithms and product modelling and system integration technologies. The reader will learn how to translate customer requirements to technical attributes, develop new and innovative products to meet customer requirements and expectations, evaluate and optimise a project design, design production systems and use them efficiently and manage a variety of customised products. *Rapid One of a kind Product Development* demonstrates how to develop new methods, tools and algorithms to address the problems in a mass customisation environment. It is a valuable source of information for researchers and engineers in the fields of design and manufacturing. Scientific and Technical Aerospace Reports, 1985
