*Books in Print Supplement* ,1994      **MacMath 9.2** John H. Hubbard,1993      **MacMath 9.0** John H. Hubbard,Beverly H. West,2013-12-21 An updated collection of twelve interactive graphics programs for the Macintosh computer addressing differential equations and iteration These versatile programs greatly enhance the understanding of the mathematics in these topics Qualitative analysis of the pictures leads to quantitative results and even to new mathematics The MacMath programs encourage experimentation and vastly increase the number of examples to which a student may be quickly exposed The are also ideal for exploring applications of differential equations and iteration which roughly speaking form the interface between mathematics and the realworld This is how mathematics models a changing situation whether it be physical forces or predator prey populations MacMath permits easy investigation of various models particularly in showing the effects of a change in parameters on ultimate behavior of the system      MacMath 9.0 John H. Hubbard,Beverly Henderson West,1992

**MacMath 9. 2** John H. Hubbard,Beverly H. West,2014-08-15      **Forthcoming Books** Rose Arny,1992      **MacMath 9. 2** John H. Hubbard,Beverly H. West,2013-12-20 MacMath is a scientific toolkit for the Macintosh TM computer developed by John H Hubbard and Beverly H West consisting of twelve graphics programs It supports mathematical computation and experimentation in dynamical systems both for differential equations and for iteration The MacMath package was designed to accompany the textbook Differential Equations A Dynamical Sys tems Approach also by J H Hubbard and B H West Part I One Dimensional Equations 1990 Part II Higher Dimensional Systems 1991 Springer Verlag We have developed this text and software for a junior senior level course in Applicable Mathematics at Cornell University in order to take advantage of the new qualitative and geometric insights made possible by the advent of excellent and easily accessible graphics Our primary reasons are two 1 A picture is worth a thousand words Graphics are far more than just a luxury the human brain is made to process visual information more information can be assimilated in a few seconds of looking at a graphics output than in months of analyzing a tabulated computer printout perhaps a centimeter thick carrying the same numerical information 2 From qualitative analysis we can obtain excellent quantitative information      *La Recherche* ,1992      An Introduction to Chaotic Dynamical Systems - Software Labs 5-6 Robert L. Devaney,1993-01 This software for Macintosh computers is designed to show the mathematical ideas behind Mandelbrot and Julia sets as well as the resulting graphics Exploring quadratic dynamical systems and cubic trigonometric and exponential functions these systems yield an array of images
