Macromolecular Engineering S. Kobayashi, M.K. Mishra, O. Nuyken, B. Sar, Y. Yagci, 2012-12-06 This volume Macromolecular Engineering Recent Advances has been developed based on the 1 st International Conference on Advanced Polymers Via Macromolecular Engineering APME 95 June 24 29 1995 at the Vassar College campus Poughkeepsie New York In APME 95 100 oral and over 50 poster presentations are to be delivered from scientists around the globe The scientific program covers recent advances in macromolecular engineering It is our vision that the knowledge of the past and the promise of the future are blended together in APME 95 to enrich and stimulate the scientists which will bring about the progress of macromolecular engineering Scientists from over 30 countries will be joining together to share this vision Although over 150 papers are to be presented in APME 95 conference we could not include all the papers in this book for a variety of reasons most importantly the authors willingness to contribute to this volume in time to meet the deadline However the 24 comprehensive chapters included in this volume are a true reflection of some of the important themes of macromolecular engineering that are part of the APME 95 conference We believe macromolecular engineering is the key to developing new polymeric materials and to this end it is hoped this volume will aid in this introspection

Polymer Science: A Comprehensive Reference, 2012-12-05 The progress in polymer science is revealed in the chapters of Polymer Science A Comprehensive Reference Ten Volume Set In Volume 1 this is reflected in the improved understanding of the properties of polymers in solution in bulk and in confined situations such as in thin films Volume 2 addresses new characterization techniques such as high resolution optical microscopy scanning probe microscopy and other procedures for surface and interface characterization Volume 3 presents the great progress achieved in precise synthetic polymerization techniques for vinyl monomers to control macromolecular architecture the development of metallocene and post metallocene catalysis for olefin polymerization new ionic polymerization procedures and atom transfer radical polymerization nitroxide mediated polymerization and reversible addition fragmentation chain transfer systems as the most often used controlled living radical polymerization methods Volume 4 is devoted to kinetics mechanisms and applications of ring opening polymerization of heterocyclic monomers and cycloolefins ROMP as well as to various less common polymerization techniques Polycondensation and non chain polymerizations including dendrimer synthesis and various click procedures are covered in Volume 5 Volume 6 focuses on several aspects of controlled macromolecular architectures and soft nano objects including hybrids and bioconjugates Many of the achievements would have not been possible without new characterization techniques like AFM that allowed direct imaging of single molecules and nano objects

with a precision available only recently. An entirely new aspect in polymer science is based on the combination of bottom up methods such as polymer synthesis and molecularly programmed self assembly with top down structuring such as lithography and surface templating as presented in Volume 7. It encompasses polymer and nanoparticle assembly in bulk and under confined conditions or influenced by an external field including thin films, inorganic organic hybrids or nanofibers. Volume 8 expands these concepts focusing on applications in advanced technologies e.g. in electronic industry and centers on combination with top down approach and functional properties like conductivity. Another type of functionality that is of rapidly increasing importance in polymer science is introduced in volume 9. It deals with various aspects of polymers in biology and medicine including the response of living cells and tissue to the contact with biofunctional particles and surfaces. The last volume is devoted to the scope and potential provided by environmentally benign and green polymers as well as energy related polymers. They discuss new technologies needed for a sustainable economy in our world of limited resources. Provides broad and in depth coverage of all aspects of polymer science from synthesis, polymerization, properties and characterization methods and techniques to nanostructures, sustainability and energy and biomedical uses of polymers. Provides a definitive source for those entering or researching in this area by integrating the multidisciplinary aspects of the science into one unique up to date reference work. Electronic version has complete cross referencing and multi media components. Volume editors are world experts in their field including a Nobel Prize winner.
