Macromolecular Architectures Jöns G. Hilborn, 2003-07-03 Molecular manipulation of nano and microstructures paves the way to produce organic polymer materials by design Such architectures comprise both the synthesis and the kinetics and thermodynamics of macromolecular organization and is the theme of this volume The book consists of four articles reviewing living polymerization to produce precisely defined linear polyesters comparing them to other living polymerization techniques The articles also deal with the synthesis of polymeric dendrimers either by the convergent or divergent approach block copolymers synthesis to define micromorphology in high performance polymers and thereby tailoring their thermal chemical mechanical and dielectrical properties and finally kinetics and thermodynamics for microstructural organization in

Macromolecular Architectures via a Combination of Cyclodextrin Host/Guest Complexation and RAFT Polymerization

Bernhard V. K. J. Schmidt, 2014-04-21 In this thesis Bernhard Schmidt describes his research into two fields in the chemical sciences supramolecular and macromolecular chemistry Schmidt first investigates cyclodextrins CDs which are well known for the formation of supramolecular host guest complexes with hydrophobic molecules in aqueous solution Schmidt then also examines reversible addition fragmentation chain transfer RAFT polymerization as a well suited tool for the synthesis of water soluble end functionalized polymers The author skillfully combines both concepts as a powerful tool to access reversibly forming macromolecular architectures The novel methods and architectures presented in this work are highly interesting from both a fundamental point of view as well as a basis for the design of efficient drug release systems The work in this thesis has led to a number of publications in top peer reviewed journals *New Smart Materials via Metal Mediated*

Macromolecular Engineering Ezat Khosravi, Yusuf Yagci, Yuri Savelyev, 2009-10-26 Control over macromolecular architecture and resulting material properties has been a central goal of polymer chemistry There has been much interest in developing new synthetic routes to prepare smart materials with novel compositions and topologies for various applications The considerable progress in the metal mediated macromolecular engineering over the past decade has had a major impact on the development of well defined macromolecular architectures and the synthesis of smart materials Particularly remarkable strong developments have been observed for the synthesis of smart materials via four metal mediated macromolecular engineering techniques Anionic ROMP ATRP and Click Chemistry These materials have found uses in advanced microelectronics technical and biomedical applications as well as in chemical sensors applications This book is comprised of 27 chapters written by leading scientists from NATO and Partner Countries who have greatly contributed in the area of Anionic ROMP ATRP and Click Chemistry It highlights the fundamental aspects and recent developments of these four powerful techniques and evaluate their potential in the syntheses of smart materials from complex structures grafts brushes dendrimers etc to nanostructures self assembly nano size etc for a wide range of applications The book reports on the

synthesis of a wide range of well defined complex polymeric systems such as thermoresponsive smart polymers star copolymers biocompatible polymers amphipilic smart nano structured conducting polymers self assembled polymers and hyperbranched polymers
