Natural Connections:

Natural Connections David Western, Michael Wright, 2013-03-19 Both realism and justice demand that efforts to conserve biological diversity address human needs as well. The most promising hope of accomplishing such a goal lies in locally based conservation efforts: an approach that seeks ways to make local communities the beneficiaries and custodians of conservation efforts. *Natural Connections* focuses on rural societies and the conservation of biodiversity in rural areas. It represents the first systematic analysis of locally based efforts and includes a comprehensive examination of cases from around the world where the community based approach is used. The book provides an overview of community based conservation in the context of the debate over sustainable development, poverty and environmental decline; case studies from the developed and developing worlds: Indonesia, Peru, Australia, Zimbabwe, Costa Rica, the United Kingdom; that present detailed examples of the locally based approach to conservation; a review of the principal issues arising from community based programs; an agenda for future action.

Natural Connections 2 Emily M. Stone, 2019-03-15 Do you also love finding adventure and intrigue in strange places? Emily Stone's second book transports you across the moat into a magical world where nature is better than fiction. Elfin skimmer dragonflies dart above the incredible community cupped inside a single leaf. A leaf miner grows up before your eyes. Lichens surrender in order to survive. By using science to tell stories, Emily wields a magic that makes the whole world feel more alive.

Stepping Up To Science and Math: Exploring the Natural Connections National Science Teachers Association, 2009-07-06

Parabolic Geometries I Andreas Čap, Jan Slovák, 2024-07-29 Parabolic geometries encompass a very diverse class of geometric structures including such important examples as conformal projective and almost quaternionic structures, hypersurface type CR structures and various types of generic distributions. The characteristic feature of parabolic geometries is an equivalent description by a Cartan geometry modeled on a generalized flag manifold: the quotient of a semisimple Lie group by a parabolic subgroup. Background on differential geometry with a view towards Cartan connections and on semisimple Lie algebras and their representations which play a crucial role in the theory is collected in two introductory chapters. The main part discusses the equivalence between Cartan connections and underlying structures including a complete proof of Kostant's version of the Bott-Borel-Weil theorem which is used as an important tool. For many examples the complete description of the geometry and its basic invariants is worked out in detail. The constructions of correspondence spaces and twistor spaces and analogs of the Fefferman construction are presented both in general and in several examples. The last chapter studies Weyl structures which provide classes of distinguished connections as well as an equivalent description of the Cartan connection in terms of data associated to the underlying geometry. Several applications are discussed throughout the text.

Emerging Approaches in Design and New Connections With Nature Özdamar, Esen Gökçe, Tandoğan, Okşan, 2021-12-03 In today's changing and transforming socio-economic, political, cultural and technological paradigms we encounter many methodologies/approaches

proposals and practices in reconsidering the disappearing or emerging relations in the human nonhuman environment nature interaction These approaches proposals and practices range from new methods of urban gardening to biophilic design and augmented immersive environments However these human centric approaches which only aim to meet their needs or emerge as technology oriented replicas and representations of nature lead to a departure from a holistic approach to the natural and artificial environment Therefore how can new and emerging approaches or methodologies draw a holistic framework for environmental health sustainability wellness and co existence between environments for all living beings Emerging Approaches in Design and New Connections With Nature covers a variety of topics related to the intersection between nature environment and ways of living and provides a comprehensive guide to biophilic design and the idea of design and nature including benefits theories and effects Covering topics such as biophilic design and sustainability soundscapes and landscapes and urban environments and design it is ideal for architects designers urban planners landscape designers policymakers engineers interior designers practitioners students academicians and researchers Sacred Natural Sites Bas Verschuuren, Jeffrey McNeely, Robert Wild, Gonzalo Oviedo, 2012-06-25 This book illustrates that sacred natural sites although often under threat exist within and outside formally recognised protected areas and heritage sites Sacred sites may well be some of the last strongholds for building resilient networks of connected landscapes as well as forming important nodes for maintaining a dynamic cultural fabric in the face of global change The book therefore bridges the gap between approaches to the conservation of cultural and biological diversity It applies a multidisciplinary approach to recognizing understanding and managing sacred natural sites It provides examples of how economic benefits such as from tourism and fisheries can be compatible goals with the conservation of sacred biodiversity and thus advancing the welfare of both people and wildlife It concludes that conservation efforts are likely to be successful only if the cultural and spiritual values are taken into account together with the socio economic interests of the custodian communities and other relevant stakeholders from books google ocm hk

Gerdjikov, Kouei Sekigawa, 2009-08-21 This book contains the contributions by the participants in the nine of a series of workshops Throughout the series of workshops the contributors are consistently aiming at higher achievements of studies of the current topics in complex analysis differential geometry and mathematical physics and further in any intermediate areas with expectation of discovery of new research directions Concerning the present one it is worthwhile to mention that in addition to the new developments of the traditional trends many attractive and pioneering works were presented and their results were contributed to the present volume The contents of this volume therefore will provide not only significant and useful information for researchers in complex analysis differential geometry and mathematical physics including their related areas but also interesting mathematics for non specialists and a broad audience The present volume contains new

developments and trends in the studies on constructions of holomorphic Cliffordian functions the swelling constructions of minimal surfaces with higher genus in flat tori the spectral properties of soliton equations on symmetric spaces new types of shallow water waves described by Camassa Holm type equations the properties of pseudo hermitian boson and fermion coherent states fractals and chaos on orthorhombic lattices and even an ambitious proposal of a graph model for Kaehler manifolds with Kaehler magnetic fields

Children Learning Outside the Classroom Sue Waite, 2017-02-13 The new edition of this bestselling textbook continues to help students and professionals understand the importance of getting children learning outside the traditional classroom and is packed full of creative information and ideas for teachers and practitioners to incorporate outdoor activities throughout the school curriculum Significantly revised and updated the second edition now includes 7 brand new chapters on Methods of assessment and evaluation Global perspectives on outdoor learning Developing whole school approaches to indoor and outdoor teaching Technology and its role outside the classroom Special Education Needs and Disabilities SEND and learning outdoors Forest School The environmental sector and outdoor learning Whether you re training to become a teacher or already working in the classroom this book demonstrates how the outdoor environment is enriching learning opportunities for children and deepening their connections with the natural world NOW FEATURING Online resources that include free SAGE journal articles weblinks annotated further readings and video to help translate theory into real life practice Sue Waite will be discussing key ideas from *Children Learning Outside the Classroom* From Birth to Eleven in the SAGE Early Years Masterclass a free professional development experience hosted by Kathy Brodie To sign up or for more information

Inspiring Primary Curriculum Design James Biddulph, Julia Flutter, 2020-06-10 This new book from the only university run primary school in the UK helps schools design their own curricula by providing access to the latest education research along with supporting ideas and questions for how this can be applied successfully Co written by practising teachers and research academics it combines practitioner expertise with the latest world class academic research Each chapter includes examples of how schools approached designing their own curricula and shows how an evidence informed approach can lead to new ideas that are bold innovative and imaginative Packed with innovative ideas and practical suggestions this book highlights the importance of using research evidence to develop teachers practice in the realities of their own classrooms and schools It is a key read for teachers school leaders teaching assistants and student teachers especially those who recognise the important role of research in developing excellence in their practice

Language, Culture and Cognition from Descartes to Lewes Timo Kaitaro, 2022-02-28 This volume describes how the significance of language and culture in forming human cognition has been understood from the mid sixteenth century to the mid nineteenth century It discusses thinkers who realized that the human mind and brain is in fact a cultural artefact and that language is not merely a means to communicate thoughts but also to form them in the first place It presents a novel perspective on the history of philosophy in which the narrative is no longer centered on the question

of whether knowledge results from experience or reason but whether experience and reason are in fact possible without language

Science is one of the few books that have changed our understanding of the philosophy of science. In this analysis of the natural sciences with a particular focus on the experimental process itself, Roy Bhaskar provides a definitive critique of the traditional positivist conception of science and stakes out an alternative realist position. Since its original publication in 1975, a movement known as Critical Realism, which is both intellectually diverse and international in scope, has developed on the basis of key concepts outlined in the text. The book has been hailed in many quarters as a Copernican Revolution in the study of the nature of science, and the implications of its account have been far reaching for many fields of the humanities and social sciences.
