Watson, 2020-10-07 This volume contains invited papers presented at the 15th Dundee Biennial Conference on Numerical Analysis held at the University of Dundee in June of 1993 The Dundee Conferences are important events in the numerical analysis calendar and the papers published here represent accounts of recent research work by leading numerical analysts covering a wide range of fields of interest The book is a valuable guide to the direction of current research in many areas of numerical analysis It will be of particular interest to graduate students and research workers concerned with the theory and application of numerical methods for solving ordinary and partial differential equations **Numerical Analysis and Parallel Processing** Peter R. Turner, 2006-11-14 Each week of this three week meeting was a self contained event although each had the same underlying theme the effect of parallel processing on numerical analysis Each week provided the opportunity for intensive study to broaden participants research interests or deepen their understanding of topics of which they already had some knowledge There was also the opportunity for continuing individual research in the stimulating environment created by the presence of several experts of international stature This volume contains lecture notes for most of the major courses of lectures presented at the meeting they cover topics in parallel algorithms for large sparse linear systems and optimization an introductory survey of level index arithmetic and superconvergence in the finite element method *Numerical analysis* G. Korte, 2012-12-06 In the late forties Mathematical Programming became a scientific discipline in its own right Since then it has experienced a tremendous growth Beginning with economic and military applications it is now among the most important fields of applied mathematics with extensive use in engineering natural sciences economics and biological sciences The lively activity in this area is demonstrated by the fact that as early as 1949 the first Symposium on Mathematical Programming took place in Chicago Since then mathematical programmers from all over the world have gathered at the international symposia of the Mathematical Programming Society roughly every three years to present their recent research to exchange ideas with their colleagues and to learn about the latest developments in their own and related fields In 1982 the XI International Symposium on Mathematical Programming was held at the University of Bonn W Germany from August 23 to 27 It was organized by the Institut für Ökonometrie und Operations Research of the University of Bonn in collaboration with the Sonderforschungsbereich 21 of the Deutsche Forschungsgemeinschaft This volume constitutes part of the outgrowth of this symposium and documents its scientific activities Part I of the book contains information about the symposium welcoming addresses lists of committees and sponsors and a brief review about the Fulerson Prize and the Dantzig Prize which were awarded during the opening ceremony **Numerical Analysis of Multiscale Computations** Björn Engquist, Olof Runborg, Yen-Hsi R.

Tsai, 2011-10-14 This book is a snapshot of current research in multiscale modeling computations and applications It covers fundamental mathematical theory numerical algorithms as well as practical computational advice for analysing single and multiphysics models containing a variety of scales in time and space Complex fluids porous media flow and oscillatory dynamical systems are treated in some extra depth as well as tools like analytical and numerical homogenization and fast multipole method

Simplicial Algorithms for Minimizing Polyhedral Functions M. R. Osborne,2001-01-08 Polyhedral functions provide a model for an important class of problems that includes both linear programming and applications in data analysis General methods for minimizing such functions using the polyhedral geometry explicitly are developed Such methods approach a minimum by moving from extreme point to extreme point along descending edges and are described generically as simplicial The best known member of this class is the simplex method of linear programming but simplicial methods have found important applications in discrete approximation and statistics The general approach considered in this text first published in 2001 has permitted the development of finite algorithms for the rank regression problem The key ideas are those of developing a general format for specifying the polyhedral function and the application of this to derive multiplier conditions to characterize optimality Also considered is the application of the general approach to the development of active set algorithms for polyhedral function constrained problems and associated Lagrangian forms Euro-Par 2003 Parallel Processing Harald Kosch,László Böszörményi,Hermann Hellwagner,2004-06-01 Euro ParConferenceSeries The European Conference on Parallel Computing Euro Par is an international conference series dedicated to the promotion and advancement of all aspects of parallel and distributed computing The major themes fall into the categories of hardware software algorithms and applications This year new and interesting topicswereintroduced likePeer to PeerComputing DistributedMultimedia stems and Mobile and Ubiquitous Computing For the rst time we organized a Demo Session showing many challenging applications The general objective of Euro Par is to provide a forum promoting the de lopment of parallel and distributed computing both as an industrial technique and an academic discipline extending the frontiers of both the state of the art and the state of the practice The industrial importance of parallel and dist buted computing is supported this year by a special Industrial Session as well as a vendors exhibition This is particularly important as currently parallel and distributed computing is evolving into a globally important technology the b zword Grid Computing clearly expresses this move In addition the trend to a bile world is clearly visible in this year s Euro Par ThemainaudienceforandparticipantsatEuro Parareresearchersinaca mic departments industrial organizations and government laboratories Euro Par aims to become the primary choice of such professionals for the presentation of new results in their speci c areas Euro Par has its own Internet domain with a permanent Web site where the history of the conference series is described <http://www.euro-par.org> The Euro Par conference series is sponsored by the Association for Computer Machinery ACM and the International Federation for Information Processing IFIP **Continuous Nonlinear Optimization for Engineering Applications in GAMS**
