Numerical Solution of Partial Differential Equations in Science and Engineering Leon Lapidus, George F. Pinder, 1982 This book was written to provide a text for graduate and undergraduate students who took our courses in numerical methods It incorporates the essential elements of all the numerical methods currently used extensively in the solution of partial differential equations encountered regularly in science and engineering Because our courses were typically populated by students from varied backgrounds and with diverse interests we attempted to eliminate jargon or nomenclature that would render the work unintelligible to any student Moreover in response to student needs we incorporated not only classical and not so classical finite difference methods but also finite element collocation and boundary element procedures After an introduction to the various numerical schemes each equation type parabolic elliptic and hyperbolic is allocated a separate chapter Within each of these chapters the material is presented by numerical method Thus one can read the book either by equation type or numerical approach Preface page v
