Every reader will find something of interest in this book from superdiffusion of the ocean surface to fetal heartbeats from
solar wind to the wearing out of tools from radioactive contamination to texture analysis from image rendering to neural
developments The all pervading link connecting these disparate disciplines is the realization that a linear approach to the
majority of natural processes is at best only an approximation that can frequently be downright misleading Consequently the
rise of what is broadly called the theory of complexity has gained tremendous momentum in the last decade or two This
modern approach aims at and frequently succeeds in correctly explaining many natural processes The papers in this volume
are based on presentations of the sixth international conference exploring the above mentioned issues These conferences are
now regular and well established among the nonlinear series of conferences This conference series is organized in different
geographical regions to encourage international collaboration Among the distinguishing features of the series is its
multidisciplinary nature which has been growing steadily NIST Serial Holdings, 1990 ,1990 **Advanced**
