Shewfelt, 2016-11-23 It has become popular to blame the American obesity epidemic and many other health related problems on processed food Many of these criticisms are valid for some processed food items but many statements are overgeneralizations that unfairly target a wide range products that contribute to our health and well being In addition many of the proposed dangers allegedly posed by eating processed food are exaggerations based on highly selective views of experimental studies We crave simple answers to our questions about food but the science behind the proclamations of food pundits is not nearly as clear as they would have you believe This book presents a more nuanced view of the benefits and limitations of food processing and exposes some of the tricks both Big Food and its critics use to manipulate us to adopt their point of view Food is a source of enjoyment a part of our cultural heritage a vital ingredient in maintaining health and an expression of personal choice We need to make those choices based on credible information and not be beguiled by the sophisticated marketing tools of Big Food nor the ideological appeals and gut feelings of self appointed food gurus who have little or no background in nutrition

Nutritional Evaluation of Food Processing Endel Karmas, Robert S. Harris, 2012-12-06 Dramatic changes in the attitudes toward human nutrition have taken place during the past decade. Food-related and medical professionals as well as consumers are now more than ever before aware of and concerned about diet, nutrition, and the beneficial and deleterious effects of food processing upon nutrients. The old saying "We are what we eat" is still relevant. Nutritious food will contribute greatly to consumers' good health and ultimately reduce medical bills. Food processing is essential to maintaining our food reserves from one harvest to another, thus letting us serve our daily meals regularly. If food processing is defined as including all treatments of foodstuffs from harvest to consumption, then more than 95% of our food may be considered as processed. In most cases, food processing and storage cause some reduction in the nutritional value of foods. Advances in food science and food technology have resulted in an increase in nutrient retention after processing. In addition, today's consumer better understands how to avoid excessive nutrient losses during food preparation. The information presented in this completely revised reference and textbook will help the reader to understand better the relationship between food processing and nutrient retention. The authors' scholarly contributions are greatly appreciated. Catalog. Supplement - Food and Nutrition Information and Educational Materials Center Food and Nutrition Information and Educational Materials Center (U.S.), 1975 Supplements 3-8 include bibliography and indexes: subject, personal, author, corporate, author title, and media index.
