

Nutrition in Early Infancy

- **Infancy** is a period of rapid change and development, with babies **tripling their body weight** in the first year.
- The **first 1,000 days of life**, from conception through toddlerhood, are **crucial for brain development** and establishing neural networks for cognitive, motor, and social-emotional skills.
- Sensitive caregiving, a safe home environment, and a healthy diet are essential for supporting these developmental processes.
- Nutrient requirements per kilogram of body weight are highest during infancy compared to any other stage of life.

Early Infancy: Meeting Nutrient Needs Through Milk

- Breast milk, infant formula, or a combination of both should be the sole source of nutrition for infants from birth to 4 to 6 months.
- Young infants' gastrointestinal tracts are not ready for complex foods, and they lack the oral motor skills for solid foods.
- Breast milk and infant formula are specifically designed to meet infants' nutrient needs and ensure safety.
- Avoid substitutes like cow's milk, goat's milk, plant-based beverages, homemade formula, or diluted formula, as they do not provide the necessary nutrients and can lead to serious health issues.

Choosing breastfeeding or formula-feeding

- The World Health Organization and the American Academy of Pediatrics recommend exclusive **breastfeeding** for about the **first 6 months of life**.
- **Breast milk** is considered the optimal source of nutrition for infants and contains various bioactive molecules like antibodies (immunoglobins), hormones, enzymes, growth factors, and protective proteins.
- **Human milk oligosaccharides** in breast milk support the development of a healthy gut microbiome by serving as food for beneficial bacteria and binding harmful bacteria.
- **Breastfeeding** benefits babies by **reducing the risk of gastrointestinal, respiratory, and ear infections**, as well as protecting against SIDS, eczema, asthma, and obesity.
- **Breastfeeding** is associated with a **small increase in IQ** and a **reduced risk of obesity** in childhood.
- Breastfeeding also benefits mothers by **reducing the risk of hypertension, type 2 diabetes, and breast and ovarian cancer**.
