Mostofsky, Jacob Lomranz, 2013-11-11 From time to time professional journals and edited volumes devote some of their pages to considerations of pain and aging as they occur among the aged in different cultures and populations One starts from several reasonable assumptions among them that aging per se is not a disease process yet the risk and frequency of disease processes increase with ongoing years The physical body s functioning and ability to restore all forms of damage and insult slow down the immune system becomes compromised and the slow growing pathologies reach their critical mass in the later years The psychological body also becomes weaker with unfulfilled promises and expectations and with tragedies that visit individuals and families and the prospect that whatever worlds remain to be conquered will most certainly not be met with success in the rapidly passing days and years that can only culminate in death Despair and depression coupled with infirmity and sensory and or motor inefficiency aggravate both the threshold and the tolerance for discomfort and synergistically collaborate to perpetuate a vicious cycle in which the one may mask the other Although the clinician is armed with the latest advances in medicine and pharmacology significant improvement continues to elude her or him The geriatric specialist all too familiar with such realities usually can offer little else than a hortative to learn to live with it but the powers and effectiveness of learning itself have declined **Contemporary Issues in Late Adulthood** Asha Banu Soletti, 2024-09-02 This book provides an in depth exploration of the challenges and diversity inherent in the ageing process in India It offers valuable insights into various aspects of growing old covering a spectrum of issues influenced by socioeconomic inequalities and diversities that shape the lives of older adults Despite existing research on aging there s often a tendency to overlook the diverse experiences within the older population a gap this book aims to bridge The chapters of the book are written by

practitioners and academicians sharing their insights on the issue The book adopts a multidisciplinary approach drawing on contributions from a diverse array of experts to comprehensively address the myriad issues affecting late adulthood From mental health and nutrition to gender dynamics income security elder abuse and intergenerational concerns each topic is explored A central theme of the book is the importance of recognizing and addressing the unique challenges faced by different groups within the elderly population By synthesizing insights from different fields the book offers a comprehensive examination of the challenges encountered by older adults across multiple dimensions of their lives This interdisciplinary perspective enriches the discourse on ageing and provides practical insights for researchers practitioners policymakers and anyone interested in advocating for the well being of ageing populations *Betrayal* United States.
