Markov Random Fields for Vision and Image Processing Andrew Blake, Pushmeet Kohli, Carsten Rother, 2011-07-22 State of the art research on MRFs successful MRF applications and advanced topics for future study This volume demonstrates the power of the Markov random field MRF in vision treating the MRF both as a tool for modeling image data and utilizing recently developed algorithms as a means of making inferences about images These inferences concern underlying image and scene structure as well as solutions to such problems as image reconstruction image segmentation 3D vision and object labeling It offers key findings and state of the art research on both algorithms and applications After an introduction to the fundamental concepts used in MRFs the book reviews some of the main algorithms for performing inference with MRFs presents successful applications of MRFs including segmentation super resolution and

image restoration along with a comparison of various optimization methods discusses advanced algorithmic topics addresses limitations of the strong locality assumptions in the MRFs discussed in earlier chapters and showcases applications that use MRFs in more complex ways as components in bigger systems or with multiterm energy functions The book will be an essential guide to current research on these powerful mathematical tools Advances in Pattern Recognition - ICAPR 2001

Sameer Singh,Nabeel Murshed,Walter Kropatsch,2003-06-29 The paper is organized as follows In section 2 we describe the no orientation discontinuity interfering model based on a Gaussian stochastic model in analyzing the properties of the interfering strokes In section 3 we describe the improved canny edge detector with an ed orientation constraint to detect the edges and recover the weak ones of the foreground words and characters In section 4 we illustrate discuss and evaluate the experimental results of the proposed method demonstrating that our algorithm significantly improves the segmentation quality Section 5 concludes this paper 2 The norm orientation discontinuity interfering stroke model Figure 2 shows three typical samples of original image segments from the original documents and their magnitude of the detected edges respectively The magnitude of the gradient is converted into the gray level value The darker the edge is the larger is the gradient magnitude It is obvious that the topmost strong edges correspond to foreground edges It should be noted that while usually the foreground writing appears darker than the background image as shown in sample image Figure 2 a there are cases where the foreground and background have similar intensities as shown in Figure 2 b or worst still the background is more prominent than the foreground as in Figure 2 c So using only the intensity value is not enough to differentiate the foreground from the background a b c d e f
