*Methods of Macroeconomic Dynamics* Stephen J. Turnovsky, 2000

Just as macroeconomic models describe the overall economy within a changing or dynamic framework the models themselves change over time In this text Stephen J Turnovsky reviews in depth several early models as well as a representation of more recent models They include traditional backward looking models linear rational expectations future looking models intertemporal optimization models endogenous growth models and continuous time stochastic models The author uses examples from both closed and open economies Whereas others commonly introduce models in a closed context tacking on a brief discussion of the model in an open economy Turnovsky integrates the two perspectives throughout to reflect the increasingly international outlook of the field This new edition has been extensively revised It contains a new chapter on optimal monetary and fiscal policy and the coverage of growth theory has been expanded substantially The range of growth models considered has been extended with particular attention devoted to transitional dynamics and nonscale growth The book includes cutting edge research and unpublished data including much of the author s own work

**Monetary Macrodynamics** Toichiro Asada, Carl Chiarella, Peter Flaschel, Reiner Franke, 2012-11-12 This book investigates the interaction of effective goods demand with the wage price spiral and the impact of monetary policy on financial and the real markets from a Keynesian perspective Endogenous business fluctuations are studied in the context of long run distributive cycles in an advanced rigorously formulated and quantitative setup The material is developed by way of self contained chapters on three levels of generality an advanced textbook level a research oriented applied level and on a third level that shows how the interaction of real with financial markets has to be modelled from a truly integrative Keynesian perspective Monetary Macrodynamics shows that the balanced growth path of a capitalist economy is unlikely to be attracting and that the cumulative forces that surround it are controlled in the large by changes in the behavioural factors that drive the wage price spiral and the financial markets Such behavioural changes can in fact be observed in actual economies in the interaction of demand driven business fluctuations with supply driven wage and price dynamics as they originate from the conflict over income distribution between capital and labour The book is a detailed critique of US mainstream macroeconomics and uses rigorous dynamic macro models of a descriptive and applicable nature It will be of particular relevance to postgraduate students and researchers interested in disequilibrium processes real wage feedback channels financial markets and portfolio choice financial accelerator mechanisms and monetary policy
