Macromolecular Interactions in Food Technology

Nicholas Parris, 1996 Discusses structure property relationships of macromolecules in foods Reviews the identification of gelation and aggregation in food systems Addresses the interactions of biopolymers in emulsion systems Covers the uses of chemical and enzymatic modifications of food proteins Examines macromolecular interactions in film formation *Starch*

Vladimir P. Yuryev, 2004 The history of starches and investigations of starch containing raw materials goes back many centuries ii steady progress in the understanding of processing and modification processes of starches awaits further elucidation Fortunately the cluster model of native starch granules is now generally accepted The remaining problems concerning physics and chemistry biochemistry and genetics and processing and modification of starches are dealt with annually at different conferences and symposiums by experts in various fields The numerous questions concerning structural organisation of starch granules their behaviour in different thermodynamic conditions temperature water content pressure during biosynthesis and in different solvents at processing of both starch and starch containing raw material deserve further study because they are not yet entirely understood With this purpose in mind scientists from different countries continue to discuss the problems of starch science **Interaction of Food Macromolecules** Ibrahim Khalifa, Zou Xiaobo, Soottawat

Benjakul, 2025-10-06 Interaction of Food Macromolecules The Matrix of Future Foods provides a detailed understanding on why biological macromolecules i.e. proteins lipids and carbohydrates with ligands interactions are essential to understanding biology at the molecular level The book aims to create a multidisciplinary forum of discussion on the interaction between macromolecules and ligands providing an understanding on how biological macromolecules with ligands interactions are central to facilitating the discovery design and development of future functional foods In addition it outlines information available on the macromolecules ligands interaction that happens inside the food matrixes and inside our bodies Knowing about the mechanisms responsible for the macromolecules ligands recognition and binding facilitates the discovery design and development of future and functional foods Discusses how the interaction between macromolecules and ligands facilitates the discovery design and development of future functional foods Shows how macromolecules can affect foods stability functionality physicochemical behaviors and bioavailability Outlines how binding models such as lock and key induced fit and conformational selection of macromolecule ligands affect the overall properties of food and foodstuffs

Proteins in Food Processing Rickey Y. Yada, 2017-11-13 Proteins in Food Processing Second Edition reviews how proteins may be used to enhance the nutritional textural and other qualities of food products After two introductory chapters the book discusses sources of proteins examining the caseins whey muscle and soy proteins and proteins from oil producing plants cereals and seaweed Part Two illustrates the analysis and modification of proteins with chapters on testing protein functionality modeling protein behavior extracting and purifying proteins and reducing their allergenicity A final group of

chapters delves into the functional value of proteins and how they are used as additives in foods Completely revised and updated with new developments on all food protein analysis and applications such as alternative proteins sources proteins as emulsifiers proteins in nanotechnology and egg proteins Reviews the wide range of protein sources available Examines ways of modifying protein sources Discusses the use of proteins to enhance the nutritional textural and other qualities of food products

Functional Properties of Food Macromolecules S.E. Hill, David A. Ledward, J.R. Mitchell, 1998-08-31 This edition updates the substantial progress that has occurred since 1988 in many aspects of understanding measuring and utilizing functional macromolecules Handbook of Hydrocolloids Glyn O. Phillips, Peter A. Williams, 2009-05-28 Hydrocolloids are among the most widely used ingredients in the food industry They function as thickening and gelling agents texturizers stabilisers and emulsifiers and in addition have application in areas such as edible coatings and flavour release Products reformulated for fat reduction are particularly dependent on hydrocolloids for satisfactory sensory quality They now also find increasing applications in the health area as dietary fibre of low calorific value The first edition of Handbook of Hydrocolloids provided professionals in the food industry with relevant practical information about the range of hydrocolloid ingredients readily and at the same time authoritatively It was exceptionally well received and has subsequently been used as the substantive reference on these food ingredients Extensively revised and expanded and containing eight new chapters this major new edition strengthens that reputation Edited by two leading international authorities in the field the second edition reviews over twenty five hydrocolloids covering structure and properties processing functionality applications and regulatory status Since there is now greater emphasis on the protein hydrocolloids new chapters on vegetable proteins and egg protein have been added Coverage of microbial polysaccharides has also been increased and the developing role of the exudate gums recognised with a new chapter on Gum Ghatti Protein polysaccharide complexes are finding increased application in food products and a new chapter on this topic as been added Two additional chapters reviewing the role of hydrocolloids in emulsification and their role as dietary fibre and subsequent health benefits are also included The second edition of Handbook of hydrocolloids is an essential reference for post graduate students research scientists and food manufacturers

Extensively revised and expanded second edition edited by two leading international authorities Provides an introduction to food hydrocolloids considering regulatory aspects and thickening characteristics Comprehensively examines the manufacture structure function and applications of over twenty five hydrocolloids
