Macromolecular Science:

Introduction to Macromolecular Science Petr Munk, 1989-09-14 An introduction to macromolecular chemistry covering the structure of macromolecules their properties their applications how they are made and methods used for studying them Includes discussion of synthetic materials as well as important biological entities Physical and chemical aspects are addressed with a minimum of mathematics

Chemical Sciences in the 20th Century Carsten Reinhardt, 2008-09-26 Chemistry in the last century was characterized by spectacular growth and advances stimulated by revolutionary theories and experimental breakthroughs Yet despite this rapid development the history of this scientific discipline has achieved only recently the status necessary to understand the effects of chemistry on the scientific and technological culture of the modern world This book addresses the bridging of boundaries between chemistry and the other classical disciplines of science physics and biology as well as the connections of chemistry to mathematics and technology Chemical research is represented as an interconnected patchwork of scientific specialties and this is shown by a mixture of case studies and broader overviews on the history of organic chemistry theoretical chemistry nuclear and cosmochemistry solid state chemistry and biotechnology All of these fields were at the center of the development of twentieth century chemistry and the authors cover crucial topics such as the emergence of new subdisciplines and research fields the science technology relationship and national styles of scientific work This monograph represents a unique treasure trove for general historians and historians of science while also appealing to those interested in the theoretical background and development of modern chemistry

Macromolecular Science Cecil Edwin Henry Bawn, 1972

Macromolecular Science R. Ulrich, 2013-06-29 In 1974 as we approached the National Bicentennial and the Centenary of the American Chemical Society Professor Otto Vogl then Chairman of the Division of Polymer Chemistry arranged a very special symposium dedicated to a review of the history of the Division It was an extraordinary occasion which included remarks by Professors Herman Mark Charles Marvel William Bailey and Charles Overberger all past Chairmen of the Division The

Executive Committee of the Division of Polymer Chemistry felt that 1976 deserved even more attention since it was to be also the 25th the Silver Anniversary of the Division of Polymer Chemistry. This year would be a most appropriate one not only to review milestones in our discipline but also to look to the future. It was decided to undertake this volume and Dr R D Ulrich agreed to serve as editor in assembling the collected papers. It is the hope of the officers of the Division that this volume will serve many purposes: a reference text, a record, and a source of perspective.

Physical Chemistry of Macromolecules S. F. Sun, 2004-01-28

Integrating coverage of polymers and biological macromolecules into a single text. Physical Chemistry of Macromolecules is carefully structured to provide a clear and consistent resource for beginners and professionals alike. The basic knowledge of both biophysical and physical polymer chemistry is covered along with important terms, basic structural properties, and relationships. This book includes end of chapter problems and references and also enables users to improve basic knowledge of biophysical chemistry and physical polymer chemistry. Explores fully the principles of macromolecular chemistry methods for determining molecular weight and configuration of molecules, the structure of macromolecules, and their separations.

Macromolecules Hans-Georg Elias, 2013-06-29

Like so many of its kind, this textbook originated from the requirements of teaching. While lecturing on macromolecular science as a required subject for chemists and materials scientists on the undergraduate, graduate, and postgraduate levels at Swiss Federal Institute of Technology at Zurich, 1960-1971, I needed a one-volume textbook which treated the whole field of macromolecular science from its chemistry and physics to its applications in a not too elementary manner. This textbook thus intends to bridge the gap between the often oversimplified introductory books and the highly specialized texts and monographs that cover only parts of macromolecular science. This first English edition is based on the third German edition, 1975, which is about 40% different from the first German edition, 1971, a result of rapid progress in macromolecular science and the less rapid education of the writer. This text intends to survey the whole field of macromolecular science. Its organization results from the following considerations: The chemical structure of macromolecular compounds should be independent of the method of synthesis; at least in the ideal case, Part I is thus concerned with the chemical and physical structure of macromolecules. Properties depend on structure. Solution properties are thus discussed in Part II, solid state properties in Part III. There are other reasons for discussing properties before syntheses. For example, it is difficult to understand equilibrium polymerization without knowledge of solution thermodynamics of the glass temperature, etc.
