collaborations have resulted in biological computers that calculate form speculative packaging that builds its own contents algae that feeds on circuit boards and a sampling of human cheeses They raise intriguing questions about the scientific process the delegation of creativity our relationship to designed matter and the importance of critical engagement Should these projects be considered art design synthetic biology or something else altogether Synthetic biology is driven by its potential some of these projects are fictions beyond the current capabilities of the technology Yet even as fictions they help illuminate question and even shape the future of the field
