Activity-Based Cost and Environmental Management Jan Emblemståg,Bert Bras,2012-12-06 It is clear that our environment is changing and not for the better Companies cannot ignore environmental issues anymore Public awareness is growing legislation is tightening and demand for ISO 14000 compliance is rising For many however the

field of environmental management including ISO 14000 is full of unfamiliar terms high learning curves unproductive approaches much frustration and often little action If environmental management is to become widely accepted and self motivated in industry it must connect to the basic motivators for business increased competitiveness and profitability Activity Based Cost And Environmental Management A Different Approach to the ISO 14000 Compliance demonstrates how environmental assessment and management can be performed based upon familiar principles cost accounting and cost management Specifically this book describes how the well established Activity Based Costing and Management principles can be extended with non monetary environmental dimensions The result is a single integrated framework called Activity Based Cost and Environmental Management that provides the tools and abilities to do both environmental management and cost management in an integrated manner and according to modern management principles This integration of economic and environmental dimensions based upon familiar cost accounting and management principles makes it easier for decision makers to not only include the environment in their decision making but also to identify rank and prioritize opportunities for win win situations where competitiveness is increased and environmental impact reduced at the same time In this book the basic concepts of Activity Based Cost and Environmental Management are described as well as how to make your own integrated Activity Based Cost and Environmental Management implementations and how to get the most out of them using uncertainty distributions Monte Carlo simulations and sensitivity charts Among others the book includes chapters on environmental management and Activity Based Costing as well as several real life case studies from companies for which the authors implemented Activity Based Cost and Environmental Management systems

Evaluating Sustainable

Development Peter S. Brandon, Patrizia Lombardi, 2009-02-18 Sustainable development has been characterised by an emphasis on environmental issues and an ad hoc approach to structuring the subject which hinders the development of knowledge in a systematic way The built environment contributes significantly to the environment but is also one of the major factors in determining whether a community is sustainable in the longer term A structure is required which aids definition provides a common set of values establishes measurement methods to define progress and suggests a management system and decision protocol which enables practitioners to engage and use the resultant structures and information This book provides a suggested structure in which all aspects of sustainable development can be included together with a set of evaluation techniques which can be used within the structure to provide assistance to decision making

Tomorrow's World Duncan

McLaren, Simon Bullock, Nusrat Yousuf, 2013-11-05 This title uses the concept of environmental space to resolve many of the issues facing us in the future and applies the lessons specifically to the UK Believing that we occupy more environmental space than the world can afford this book seeks to explain what we can do to live comfortably within what we actually have through efficiency and sufficiency In addition it aims to present the sustainable levels of consumption for Britain as targets for government industry and households as well as an idea of how to achieve them *Evaluating Sustainable Development in the Built Environment* Peter S. Brandon, Patrizia Lombardi, 2010-12-01 The first edition was extremely well received providing an introduction and insight to this important topic in a comprehensive yet easy to read form It was chosen to be issued to the representatives of the organizations from the G8 and G20 countries attending the University Summit held in Turin in 2009 which addressed the issue of how education and research can assist sustainable development The second edition completely updated to reflect the significant advances and new insights that have been made since publication of the first edition focuses on two main issues Facilitating a dialogue between all stakeholders so that the complexity of the problem can be exposed structured and communicated Understanding how to assess progress in sustainable development It continues to provide coherent guidance on the techniques that can be used to assess sustainable development in a rigorous manner The approach is introduced using illustrations and case studies together with follow up references It remains the ideal starting point for those trying to get a handle on the subject and for those who wish to examine a structured and systematic approach to the evaluation of sustainable development in the built environment *Breaking New Ground*, 2002 First Published in 2002 Routledge is an imprint of Taylor Francis an informa company **Just Sustainabilities** Julian Agyeman, Robert Bullard, Bob Evans, 2012-04-27 Environmental activists and academics alike are realizing that a sustainable society must be a just one Environmental degradation is almost always linked to questions of human equality and quality of life Throughout the world those segments of the population that have the least political power and are the most marginalized are selectively victimized by environmental crises This book argues that social and environmental justice within and between nations should be an integral part of the policies and agreements that promote sustainable development The book addresses the links between environmental quality and human equality and between sustainability and environmental justice **Trade, Poverty and The Environment** Adrian Flint, 2008-04-01 In 2000 the European Union and its 78 African Caribbean Pacific partners signed the Cotonou Agreement heralding a new era in developmental politics This comprehensive book draws attention to the limitations in the EU's approach to implementing pro poor environmentally sustainable development amongst its African Caribbean Pacific partners **Town and Country Planning in the UK** Barry Cullingworth, Vincent Nadin, 2006-10-16 This revised fourteenth edition reinforces this title's reputation as the bible of British planning It provides a thorough explanation of planning processes including the institutions involved tools systems policies and changes to land use **Living in the Labyrinth of Technology** Willem H. Vanderburg, 2005-12-15 From the very beginnings of their existence human beings

have distinguished themselves from other animals by not taking immediate experience for granted Everything was symbolized according to its meaning and value a fallen branch from a tree became a lever a tree trunk floating in the river became a canoe Homo logos created communities based on cultures humanity s first megaproject Further symbolization of the human community and its relation to nature led to the possibility of creating societies and civilizations Everything changed as these interposed themselves between the group and nature Homo societas created ways of life able to give meaning direction and purpose to many groups by means of very different cultures humanity s second megaproject What Das Kapital did for the nineteenth century and La technique did for the twentieth Willem H Vanderburg s Living in the Labyrinth of Technology seeks to create for the twenty first century an attempt at understanding the world in a manner not shackled to overspecialized scientific knowing and technical doing Western civilization may well be creating humanity s third megaproject based not on symbolization for making sense of and living in the world but on highly specialized desymbolized knowing stripped of all peripheral understanding Vanderburg focuses on two interdependent forces in his narrative namely people changing technology and technology changing people The latter aspect although rarely considered turns out to be the more critical one for understanding the spectacular successes and failures of contemporary ways of life As technology continues to change the social and physical world the experiences of this world grow people s minds and society s cultures thereby re creating human life in the image of technology Living in the Labyrinth of Technology argues that the twenty first century will be dominated by this pattern unless society intervenes on human as opposed to technical terms
