Maternal Behavior In Mammals:

Maternal Behavior in Mammals Harriet Lange Rheingold, 1963 **Maternal Behavior in Mammals** Harriet Lange Rheingold, 1963 *Parental Care in Mammals* David J. Gubernick, 2013-11-11 The editors of this volume have honored me by their invitation to write its Fore word an invitation extended because of my editing a book on the maternal behavior of mammals in 1963 Much as I would like to think that I had opened a new area of study and so played some part in the appearance of this fine new collection of chapters the facts are quite otherwise That in 1963 I could assemble the efforts of many distinguished investigators shows that the topic had already engaged their attention and had for some years past But even then the topic had origins extending much farther into the past to mention only Wiesner and Sheard's book *Maternal Behavior in the Rat* of 1933 Nevertheless in 1963 it seemed to me that the study of maternal care in mammals had lagged behind the study of other kinds of social behavior The present volume does much to establish parental care of the young as a topic central to an understanding of the relation between ontogeny and phylogeny to the development of the young to the social organization of the species and to its preservation It may now be seen not only as interesting but as a most significant pattern of behavior among mammals **Maternal Behavior in Mammals. Harriet L. Rheingold, Editor. [By Various Authors. With Illustrations.]** Harriet Lange RHEINGOLD, 1963 **Ethology of Mammals** R. F. Ewer, 2013-12-11

Maternal Effects in Mammals Dario Maestripieri, Jill M. Mateo, 2009-08-01 Evolutionary maternal effects occur whenever a mother's phenotypic traits directly affect her offspring's phenotype independent of the offspring's genotype Some of the phenotypic traits that result in maternal effects have a genetic basis whereas others are environmentally determined For example the size of a litter produced by a mammalian mother a trait with a strong genetic basis can affect the growth rate of her offspring while a mother's dominance rank an environmentally determined trait can affect the dominance rank of her offspring The first volume published on the subject in more than a decade *Maternal Effects in Mammals* reflects advances in genomic ecological and behavioral research as well new understandings of the evolutionary interplay between mothers and their offspring Dario Maestripieri and Jill M Mateo bring together a learned group of contributors to synthesize the vast literature on a range of species highlight evolutionary processes that were previously overlooked and propose new avenues of research *Maternal Effects in Mammals* will serve as the most comprehensive compendium on and stimulus for interdisciplinary treatments of mammalian maternal effects *Knobil and Neill's Physiology of Reproduction* , 2005-12-12 The 3rd edition the first new one in ten years includes coverage of molecular levels of detail arising from the last decade's explosion of information at this level of organismic organization There are 5 new Associate Editors and about 2/3 of the chapters have new authors Chapters prepared by return authors are extensively revised Several new chapters have been added on the topic of pregnancy reflecting the vigorous investigation of this topic during the last decade The information covered includes both human and experimental animals basic principles are sought and information at the organismic and

The Development and Integration of Behaviour Paul Patrick Gordon Bateson, 1991-05-30 What regularities lie behind the development and organization of behaviour in animals and humans One theme emerging from this book is that ideas have to flow in both directions between the different levels of analysis between the neural and behavioural levels and between the individual and the social group Another theme is that it is not enough to identify the many factors operating in the development and integration of behaviour The processes must also be studied directly Bringing together work at different levels and studying behavioural dynamics require more knowledge and expertise than any one person can usually command Links have to be made between different disciplines and specialists have to learn to work with others who speak with what at

first seem to be mutually incomprehensible scientific languages The book illustrates how this may be achieved The themes of this book are strongly related to the approach of Robert Hinde in whose honour the chapters were written Hormones, Brain and Behavior, 2016-11-09 Hormones Brain and Behavior Third Edition offers a state of the art overview of hormonally mediated behaviors including an extensive discussion of the effects of hormones on insects fish amphibians birds rodents and humans Entries have been carefully designed to provide a valuable source of information for students and researchers in neuroendocrinology and those working in related areas such as biology psychology psychiatry and neurology This third edition has been substantially restructured to include both foundational information and recent developments in the field Continuing the emphasis on interdisciplinary research and practical applications the book includes articles aligned in five main subject sections with new chapters included on genetic and genomic techniques and clinical investigations This reference provides unique treatment of all major vertebrate and invertebrate model systems with excellent opportunities for relating behavior to molecular genetics The topics cover an unusual breadth from molecules to ecophysiology ranging from basic science to clinical research making this reference of interest to a broad range of scientists in a variety of fields Comprehensive and updated coverage of a rapidly growing field of research Unique treatment of all major vertebrate and invertebrate model systems with excellent opportunities for relating behavior to molecular genetics Covers an unusual breadth of topics and subject fields ranging from molecules to ecophysiology and from basic science to clinical research Ideal resource for interdisciplinary learning and understanding in the fields of hormones and behavior **What Animals Teach Us about Families** Beth A. Berkowitz, 2026-01-06 Reading the Bible and rabbinic literature to reimagine the bonds between animals Moving beyond debates about the ethics of animal consumption to focus on animals intimate lives Beth A Berkowitz examines the contribution of religious traditions and sacred texts to contemporary conversations about animals Reading the four animal family laws of the Bible alongside their rabbinic interpretations from ancient times to today she examines the bonds that animals form with each other and reimagines family to include new forms of life and alternative modes of kinship Humanitarian politics and biblical law tend to take for granted that human interests supersede animal interests and that our moral obligation extends only to avoiding unnecessary suffering but necessity is determined by humans What Animals Teach Us About Families looks at animal emotions animal agency family diversity and human response to reconsider the obligations and opportunities the animal family presents **Mammal Phylogeny** Frederick S. Szalay, Michael J. Novacek, Malcolm C. McKenna, 2012-12-06 The roots of this book and its sister volume Mammal Phylogeny Placentals go back to discussions and plans shelved for a while between F S Szalay and W P Luckett during the international and multidisciplinary symposium on rodent evolution sponsored by NATO July 2 6 1984 in Paris That conference organized by W P Luckett and J L Hartenberger the proceedings of which were published in 1985 proved an inspiring experience to all of the participants as this was repeatedly expressed both during and after the meetings In addition to issues relating to rodents general theoretical topics

pertaining to the evolutionary biology and systematics of other groups of mammals regularly surfaced during the presentations and discussions. M. J. Novacek, who was also a participant in the rodent symposium, shared with Luckett and Szalay the enthusiasm acquired there and he also expressed strong interest for a meeting on mammal evolution with a general focus similar to that of the rodent gathering. In 1988, Szalay and Luckett, after having planned in detail a program, direction and core list of participants, were awarded a \$30,000 grant by the Alfred P. Sloan Foundation through the Research Foundation of the City University of New York. The grant was contingent upon obtaining additional funds sufficient to assure that the symposium would be held. Raising the remaining funds proved to be a problem.
