Research in History and Philosophy of Mathematics Maria Zack, Dirk Schlimm, 2018-09-14 This volume contains thirteen papers that were presented at the 2017 Annual Meeting of the Canadian Society for History and Philosophy of Mathematics Soci t  canadienne d'histoire et de philosophie des math matiques which was held at Ryerson University in Toronto It showcases rigorously reviewed modern scholarship on an interesting variety of topics in the history and philosophy of mathematics from Ancient Greece to the twentieth century A series of chapters all set in the eighteenth century consider topics such as John Marsh's techniques for the computation of decimal fractions Euler's efforts to compute the surface area of scalene cones a little known work by John Playfair on the practical aspects of mathematics and Monge's use of descriptive geometry After a brief stop in the nineteenth century to consider the culture of research mathematics in 1860s Prussia the book moves into the twentieth century with an examination of the historical context within which the Axiom of Choice was developed and a paper discussing Anatoly Vlasov's adaptation of the Boltzmann equation to ionized gases The remaining chapters deal with the philosophy of twentieth century mathematics through topics such as an historically informed discussion of finitism and its limits a reexamination of Mary Leng's defenses of mathematical fictionalism through an alternative anti-realist approach to mathematics and a look at the reasons that mathematicians select specific problems to pursue Written by leading scholars in the field these papers are accessible to not only mathematicians and students of the history and philosophy of mathematics but also anyone with a general interest in mathematics **ENC Focus** ,1994

Handbook of the History and Philosophy of Mathematical Practice Bharath Sriraman, 2024-04-26 The purpose of this unique handbook is to examine the transformation of the philosophy of mathematics from its origins in the history of

mathematical practice to the present. It aims to synthesize what is known and what has unfolded so far as well as to explore directions in which the study of the philosophy of mathematics as evident in increasingly diverse mathematical practices is headed. Each section offers insights into the origins, debates, methodologies, and newer perspectives that characterize the discipline today. Contributions are written by scholars from mathematics, history, and philosophy as well as other disciplines that have contributed to the richness of perspectives abundant in the study of philosophy today who describe various mathematical practices throughout different time periods and contrast them with the development of philosophy.

This book, with its exciting depth and breadth, illuminates us about the history, practice, and the very language of our subject about the role of abstraction, of proof, and manners of proof about the interplay of fundamental intuitions about algebraic thought in contrast to geometric thought. The richness of mathematics and the philosophy encompassing it is splendidly exhibited over the wide range of time these volumes cover from deep Platonic and Neoplatonic influences to the most current experimental approaches. Enriched as well with vivid biographies and brilliant personal essays written by and about people who play an important role in our tradition, this extraordinary collection of essays is fittingly dedicated to the memory of Chandler Davis, Reuben Hersch, and Yuri Manin. Barry Mazur, Gerhard Gade, University Professor, Harvard University: This encyclopedic Handbook will be a treat for all those interested in the history and philosophy of mathematics. Whether one is interested in individuals from Pythagoras through Newton and Leibniz to Grothendieck, fields, geometry, algebra, number theory, logic, probability, analysis, viewpoints from Platonism to Intuitionism, or methods, proof, experiment, computer assistance, the reader will find a multitude of chapters that inform and fascinate. John Stillwell, Emeritus Professor of Mathematics, University of San Francisco: Recipient of the 2005 Chauvenet Prize. Dedicating a volume to the memory of three mathematicians, Chandler Davis, Reuben Hersch, and Yuri Manin, who went out of their way to show to a broader audience that mathematics is more than what they might think is an excellent initiative. Gathering authors coming from many different backgrounds but who are very strict about the essays they write was successfully achieved by the editor in chief. The result, a great source of potential inspiration. Jean Pierre Bourguignon, Nicolaas Kuiper, Honorary Professor at the Institut des Hautes Études Scientifiques.

Einstein's War Matthew Stanley, 2020-05-05 Winner of the Watson Davis and Helen Miles Davis Prize Stanley is a storyteller par excellence The Washington Post The birth of a world changing idea in the middle of a bloodbath Einstein's War is a riveting exploration of both the beauty of scientific creativity and enduring horrors of human nature These two great forces battle in a story that culminates with a victory now a century old the mind bending theory of general relativity Few recognize how the Great War the industrialized slaughter that bled Europe from 1914 to 1918 shaped Einstein's life and work While Einstein never held a rifle he formulated general relativity blockaded in Berlin literally starving He lost 50 pounds in three months unable to communicate with his most important colleagues Some of those colleagues fought against rabid nationalism others were busy inventing chemical warfare being a scientist trapped you in the power plays of empire Meanwhile Einstein struggled to craft relativity and persuade the world that it was correct This was after all the first complete revision of our conception of the universe since Isaac Newton and its victory was far from sure Scientists seeking to confirm Einstein's ideas were arrested as spies Technical journals were banned as enemy propaganda Colleagues died in the trenches Einstein was separated from his most crucial ally by barbed wire and U boats This ally was the Quaker astronomer and Cambridge don A S Eddington who would go on to convince the world of the truth of relativity and the greatness of Einstein In May of 1919 when Europe was still in chaos from the war Eddington led a globe spanning expedition to catch a fleeting solar eclipse for a rare opportunity to confirm Einstein's bold prediction that light has weight It was the result of this expedition the proof of relativity as many saw it that put Einstein on front pages around the world Matthew Stanley's epic tale is a celebration of how bigotry and nationalism can be defeated and of what science can offer when they are

Philosophy and Conceptual History of Science in Taiwan Cheng-Hun Lin, Daiwie Fu, 2012-12-06 Scholarly studies of mathematics and the sciences carried out by philosophers and historians in Taiwan in recent years have two main goals first positive and critical participation in the logical analysis of scientific theories and scientific explanation and second conceptual clarification joined with faithful historical investigation of the sciences of traditional and modern

China In this book Professors Cheng hung Lin and Daiwie Fu have gathered fine representative essays from both endeavors Their two introductory discussions guide the reader in three ways First we have insightful remarks concerning the development of science studies in Taiwan during the past three decades Then we see the place of such studies particularly those in the logic and methodology of science in the philosophy of science as that discipline has evolved in the West in recent years Finally we have an account of the changes that have occurred among philosophers and historians of Chinese science as they have turned away from an assumption of Western definitions of scientific achievement a turn that is common to

Taiwanese Chinese Japanese and Western scholars **Logical Studies of Paraconsistent Reasoning in Science and Mathematics** Holger Andreas, Peter Verdée, 2016-12-02 This book covers work written by leading scholars from different schools within the research area of paraconsistency The authors critically investigate how contemporary paraconsistent logics can be used to better understand human reasoning in science and mathematics Offering a variety of perspectives they shed a new light on the question of whether paraconsistent logics can function as the underlying logics of inconsistent but useful scientific and mathematical theories The great variety of paraconsistent logics gives rise to various interrelated questions such as what are the desiderata a paraconsistent logic should satisfy is there prospect of a universal approach to paraconsistent reasoning with axiomatic theories and to what extent is reasoning about sets structurally analogous to reasoning about truth Furthermore the authors consider paraconsistent logic's status as either a normative or descriptive discipline or one which falls in between and which inconsistent but non trivial axiomatic theories are well understood by which types of paraconsistent approaches This volume addresses such questions from different perspectives in order to i obtain a representative overview of the state of the art in the philosophical debate on paraconsistency ii come up with fresh ideas for the future of paraconsistency and most importantly iii provide paraconsistent logic with a stronger philosophical foundation taking into account the developments within the different schools of paraconsistency The American Mathematical Monthly ,1922 Includes section Recent publications
